Manual of Paints, Varnishes and Resins H. Panda, 2011-10-01 Paint can be applied to almost any kind of object It is used in
the production of art in industrial coating as a driving aid road surface marking or as a barrier to prevent corrosion or water
damage Quality control for paint product can be achieved through conducting a number of physical and chemical tests to
paint samples In the paint and coating industries paint testing is often used to determine if the paint or coating will adhere
properly to the substrates to which they are applied Testing of paint varnishes and resins can be done in a number of
different ways The fact of the matter is that many industries use several different paint testing methods in order to ensure
accurate results Products of the surface coating are essential for the preservation of all types of architectural structures
including factories from ordinary attacks of weather micro and macro organisms atmospheric pollutant etc Architectural

reduce or eliminate the destructive effects of weather chemicals and water vapour They are also used as sound deadeners to
provide resistance to heat transfer and to provide abrasive coatings to minimize slip hazards Traffic paint is an important
