Review zu den Perspektiven der ländlichen Versorgung

Baier, Natalie, Struckmann, Verena, 2015-01-14 Hintergrund Der demographische Wandel und die Zunahme chronischer

Krankheiten verbunden mit einer immer komplexer werdenden Pflegebedürftigkeit stellen die deutsche Gesundheitspolitik vor immer neue Herausforderungen. Insbesondere in den strukturschwachen ländlichen Regionen besteht Handlungsdruck, um hier eine bedarfsgerechte medizinische Versorgung zu gewährleisten. Wichtig ist es in diesem Zusammenhang die Zusammenarbeit von Ärzten und anderen Gesundheitsprofessionen neu zu organisieren. Dies ist möglich, indem innovative Versorgungsformen gefördert und neue Gesundheitsprofessionen geschaffen werden, da die Versorgung chronisch Kranker und älterer Menschen mehr als nur eine akute Versorgung erfordert. Ziel dieser Review betrachtet inwieweit international angewandte Maßnahmen zur Rekrutierung von Gesundheitspersonal einem Fachkräftemangel im ländlichen Raum entgegenwirken können. Außerdem werden neue Professionen und innovative Strukturen der Versorgung im ländlichen Raum beschrieben. Methodik: Für die Untersuchung erfolgte eine Literaturrecherche mittels einer umfangreichen Suchstrategie in den Datenbanken PubMed und Scopus. Eingeschlossen wurden Studien, die im Zeitraum 1990-2013 durchgeführt wurden, die Maßnahmen zur Rekrutierung von Gesundheitspersonal in den ländlichen Raum beschreiben und die neuen Versorgungsformen vorstellen. Ergänzend wurde eine Expertenbefragung per E-Mail durchgeführt. Insgesamt wurden 65 Experten des Health Systems and Policy Monitor Netzwerks angeschrieben, wobei Experteninformation aus dem Europäischen Forschungsprojekt MUNROS verwendet wurde. Für einen Großteil der betrachteten Maßnahmen liegt keine Evidenz vor. Ein ländlicher Hintergrund jedoch gilt als am besten evaluiert und als wirksamste Maßnahme zur Rekrutierung von Ärzten in den ländlichen Raum. Inkonsistente Ergebnisse zeigen medizinische Fakultäten in ländlichen Gebieten sowie eine finanzielle Unterstützung während des Studiums mit einhergehender Verpflichtung im ländlichen Raum tätig zu werden. Studienergebnisse ergeben, dass die Berufsgruppen der PAs und NPs eine qualitativ hochwertige und kosteneffektive Arbeit leisten. In den USA, Kanada, Neuseeland, Australien und Großbritannien konnten die meisten neuen Versorgungsmodelle identifiziert werden, jedoch besteht hier das Problem, dass diese häufig noch nicht evaluiert worden sind. Schlussfolgerungen: Insgesamt ist deutlich geworden, dass keine der betrachteten Maßnahmen allein gegen einen zukünftigen Fachkräftemangel wirken kann. Verschiedene Modelle werden, daher bereits Kombinationen aus den vorgestellten Ansätzen an. Hierbei sollte auf eine Vertrautheit des medizinischen Personals mit den speziellen Gegebenheiten in ländlichen Regionen sowie auf eine attraktive Gestaltung der Arbeitsbedingungen geachtet werden. Background: The demographic change and the increase of chronic diseases combined with the increasingly complex need for care presents new challenges to health policy in Germany. Especially in underdeveloped rural regions the need for action exists in order to ensure an appropriate medical care in these regions. In this context it is important to organize collaboration between physicians and other health care professionals. This is possible with the support of innovative forms of health care and the creation of new roles for health professionals as the care of chronically ill people and the elderly requires more than just acute care. Objective: This review depicts to what extent internationally applied measures for the recruitment of health care professionals are able to counteract the shortage of

skilled professionals in rural areas Moreover new professional roles and innovative structures of health care in rural areas are described Methods A literature review was conducted by means of a comprehensive search strategy in the databases PubMed and Scopus We included studies which were conducted between the years 1990 and 2003 which described measures for recruitment of health care personal into rural areas and introduced new ways of health care In addition an expert survey was conducted via e mail Overall 65 experts were contacted via the Health Systems and Policy Monitor Network besides expert information from the European research project MUNROS was used Results For the majority of considered measures no evidence is available however a rural background is classified as the best evaluated and most effective measure to recruit physicians into rural areas Measures as the establishment of medical faculties in rural areas and financial support during the studies along with the obligation to practice in a rural area show inconsistent results Study results illustrate that the professional groups of the PAs and the NPs provide a high quality and cost effective work In the USA Canada New Zealand Australia and the UK most of the new care delivery models could be identified however most of them have often not yet been evaluated Conclusions Overall it has become clear that none of the considered measures can act alone against a future health professional s shortage in rural areas Therefore different models are already applying combinations of the presented approaches In this context a familiarity with the specific context of the medical personal should be regarded as well as an attractive design of the working conditions

Aspect-Oriented, Model-Driven Software Product Lines Awais Rashid, Jean-Claude Royer, Andreas Rummler, 2011-09-08 Software product lines provide a systematic means of managing variability in a suite of products They have many benefits but there are three major barriers that can prevent them from reaching their full potential First there is the challenge of scale a large number of variants may exist in a product line context and the number of interrelationships and dependencies can rise exponentially Second variations tend to be systemic by nature in that they affect the whole architecture of the software product line Third software product lines often serve different business contexts each with its own intricacies and complexities The AMPLE <http://www.ample-project.net> approach tackles these three challenges by combining advances in aspect oriented software development and model driven engineering The full suite of methods and tools that constitute this approach are discussed in detail in this edited volume and illustrated using three real world industrial case studies
