Answers

1 What is diffusion?	net movement of particles from an area of high concentration to an area of low concentration along a concentration gradient - this is a passive process (does not require energy from respiration)
2 Name three factors that affect the rate of diffusion.	concentration gradient, temperature, membrane surface area
3 How are villi adapted for exchanging substances?	- long and thin - increases surface area - one-cell-thick membranes - short diffusion distance - good blood supply - maintains a steep concentration gradient
4 How are the lungs adapted for efficient gas exchange?	- alveoli - large surface area - moist membranes - increases rate of diffusion - one-cell-thick membranes - short diffusion distance - good blood supply - maintains a steep concentration gradient
5 How are fish gills adapted for efficient gas exchange?	- large surface area for gases to diffuse across - thin layer of cells - short diffusion distance - good blood supply - maintains a steep concentration gradient
6 What is osmosis?	diffusion of water from a dilute solution to a concentrated solution through a partially permeable membrane
7 Give one example of osmosis in a plant.	water moves from the soil into the root hair cell
8 What is active transport?	movement of particles against a concentration gradient - from a dilute solution to a more concentrated solution - using energy from respiration
9 Why is active transport needed in plant roots?	concentration of mineral ions in the soil is lower than inside the root hair cells - the mineral ions must move against the concentration gradient to enter the root hair cells
10 What is the purpose of active transport in the small intestine?	sugars can be absorbed into the blood when the concentration of sugar in the small intestine is lower than the concentration of sugar in the blood

Answers

1 Give two adaptations of a root hair cell.	long projection, lots of mitochondria
2 What is the function of a red blood cell?	carries oxygen around the body
3 What type of cell are bacteria?	prokaryotic
4 What is the function of ribosomes?	enable production of proteins (protein synthesis)
5 Give two adaptations of a nerve cell.	branched endings, myelin sheath insulates the axon
6 What is the function of a sperm cell?	fertilises an ovum (egg)
7 Give two adaptations of a sperm cell.	tail, contains lots of mitochondria
8 How are electron microscopes different to light microscopes?	electron microscopes use beams of electrons instead of light, cannot be used to view living samples, are much more expensive, and have a much higher magnification and resolution

Required practical skills

Practice answering questions on the required practicals using the example below. You need to be able to apply your skills and knowledge to other practicals too.

Describe the results	Worked example	Practice
Different concentrations of sugar and salt solutions both affect the movement of water by osmosis, causing cells to lose or gain water, and changing the mass of a tissue sample. For this practical you need to be able to accurately measure length, mass, and volume to measure osmosis in cells. You will need to be comfortable applying this knowledge to a range of samples, not just the typical example of potato tissue, as osmosis happens in all cells.	A sample of carrot was placed into a 0.75 mol/dm ³ sugar solution for 30 minutes. The mass of the carrot was recorded before and after this. Initial mass = 6.52 g Final mass = 3.91 g 1 Determine the percentage change in mass of the sample. Change in mass = 3.91 - 6.52 = -2.61 g Percentage change in mass = $\left(\frac{-2.61}{6.52}\right) \times 100 = -39.9\%$ (a minus sign is used because the sample lost mass) 2 Explain why this experiment should be repeated, and give one other variable that should be controlled. The experiment should be repeated to give a more reliable result, and to allow calculation of a mean loss in mass for the sample. The dimensions of the carrot samples need to be controlled between repeats.	1 Give one reason why it is important to dry the samples of carrot cores before they are weighed. 2 When repeating this experiment using different concentrations of sugar solution, a student found that one sample did not change mass. Suggest what this tells you about the concentration of the solution. Assume no error in the experiment. 3 Two students set up this experiment. Student A said that each sample of carrot must have the same starting mass. Student B argued that each sample must have the same length and width. Explain which student is correct.
