Hamilton, Gijss Calliauw, 2013-08-05 Oils and fats are almost ubiquitous in food processing whether naturally occurring in foods or added as ingredients that bring functional benefits Whilst levels of fat intake must be controlled in order to avoid obesity and other health problems it

remains the fact that fats along with proteins and carbohydrates are one of the three macronutrients and therefore an essential part of a healthy diet. The ability to process oils and fats to make them acceptable as part of our food supplies is a key component in our overall knowledge of them. Without this ability the food that we consume would be totally different and much of the flexibility available to us as a result of the application of processing techniques would be lost. Obviously we need to know how to process fatty oils but we also need to know how best to use them once they have been processed. This second edition of *Edible Oil Processing* presents a valuable overview of the technology and applications behind the subject. It covers the latest technologies which address new environmental and nutritional requirements as well as the current state of world edible oil markets. This book is intended for food scientists and technologists who use oils and fats in food formulations as well as chemists and technologists working in edible oils and fats processing.
