Several studies have reported that users might not be satisfied with a recommendation even though it exhibits high recommendation accuracy [4]. For this reason we consider that a recommendation having only accuracy is satisfactory. The serendipity of a recommendation is an important element when considering a user's long term profits. A recommendation that brings serendipity to users would solve the problem of user weariness and would lead to exploitation of users' tastes. The viewpoint of the diversity of the recommendation as well as its accuracy should be required for future recommender systems.
