1. What is a positive externality?

Name _____ Date _____

Positive Externality: An In-Depth Analysis

A positive externality occurs when a good or service benefits more than one person or organization without being directly intended. It creates positive externalities, which produce costs or benefits external to the market. These externalities can be either positive or negative, and they can be internal or external. For example, a factory that pollutes the environment creates a negative externality, while a factory that produces clean energy creates a positive externality.

Defining Positive Externality

A positive externality is also known as an external benefit, which occurs when the actions of individuals or firms have beneficial or positive effects on others who are not directly involved in the activity. These benefits are not reflected in the market price of goods or services, leading to under-consumption or under-production of the good or service.

Examples of Positive Externalities

1. **Education:** One of the most common examples of a positive externality is education. When individuals pursue higher education, they not only improve their personal earning potential but also benefit society by being more informed citizens, contributing to economic growth, and increasing productivity. These benefits are not directly reflected in the market value of education, leading to under-investment in education.
2. **Research and Development (R&D):** Innovation is a good that leads to technological advancements that benefit society as a whole. For instance, the development of new medical treatments or renewable energy technologies creates positive externalities by improving the quality of life and addressing global challenges.
3. **Public Health and Green Spaces:** Maintaining public health and creating green spaces in urban areas have positive externalities. They contribute to the overall well-being of the community, reducing the burden on the healthcare system and improving the quality of life.
