processing engine and the execution speed of any SQL query is influenced by many factors both internal and external. As a declarative data access method, SQL relies on the Oracle cost-based optimizer to always choose the best execution plan for every SQL query. However, Oracle's SQL is among the most flexible and robust in the world, and along with this great power comes complexity. Tuning Oracle SQL is the single most important skill of any Oracle professional, and Oracle professionals are challenged to create SQL statements that will support thousands of concurrent executions with sub-second response time. Advanced Oracle SQL Tuning is a pragmatic treatment of Oracle SQL tuning, short on theory and big on real-world techniques and tips. This book is the culmination of the author's 25 years of full-time DBA experience, and he shares expert tips and secrets for hypercharging SQL execution speed. This book covers advanced topics and it is not appropriate for beginners, dilettantes, or neophytes.

Oracle Tuning Alexey B. Danchenkov, 2006-02-01. Oracle 10g has become the most complex database ever created, and Oracle tuning has become increasingly complex. This book provides a complete step-by-step approach for holistic Oracle tuning, and it is the accumulated knowledge from tuning thousands of Oracle databases. Incorporating the principles of artificial intelligence, Oracle 10g has developed a sophisticated mechanism for capturing and tracking database performance over time periods. This new complexity has introduced dozens of new v and DBA views, plus dozens of Automatic Workload Repository (AWR) tables. The AWR and its interaction with the Automatic Database Diagnostic Monitor (ADDM) is a revolution in database tuning. By understanding the internal workings of the AWR tables, the senior DBA can develop time-series tuning models to predict upcoming outages and dynamically change the instance to accommodate the impending resource changes. This is not a book for beginners. Targeted at the senior Oracle DBA, this book dives deep into the internals of the v views, the AWR table structures, and the new DBA history views. Packed with ready-to-run scripts, you can quickly monitor and identify the most challenging performance issues.
