

The order of operations is a critical concept for fourth graders to grasp in preparation for algebra. This introductory lesson on the order of operations will teach your students about the helpful acronym PEMDAS.

Learning Objectives

Students will be able to solve math expressions using the order of operations.

Materials and preparation

- Class set of *Parentheses First! Find the Missing Operation #1* worksheet: <https://www.education.com/worksheet/article/parentheses-find-missing-operation-1/>
- Class set of *Parentheses First! Find the Missing Operation #2* worksheet: <https://www.education.com/worksheet/article/parentheses-find-missing-operation-2/>
- Student math journals or lined paper
- Computer or tablet with internet and a projector
- Document camera
- Whiteboards and markers (one per student)

Key terms

- PEMDAS
- operations
- order of operations
- parenthesis

Introduction (5 minutes)

- On a piece of chart paper, write $4 + 5 \times 6$, and ask the students to solve it in their math journals.
- Ask students to compare their answers with an elbow partner.
- Invite students to share their answer with the whole class.
- Explain on the chart paper that if you add 4 to 5 first, and get 9, then multiply 9 by 6 which equals 54, the answer is incorrect. Tell students that when you have multiple **operations** meaning addition, subtraction, multiplication, and/or division, in one expression, you must follow some rules about the order of operations.
- Tell students that the **order of operations** states that multiplication and division must be done before addition and subtraction. For the sample problem, first you would multiply 5 by 6 which is 30, then add 4, equalling 34.

Explicit Instruction/Teacher modeling (10 minutes)

- Write a few more problems on chart paper such as $8 - 4 \div 2$ and $12 - 2 \times 5 + 6$. Show students how to solve these problems.
- Tell students that if we rewrite the problems as follows: $(8 - 4) \div 2$ and $12 - 2 \times (5 + 6)$, the answers would change. Explain that a **parenthesis**, or the $()$ symbol, means that part of the expression should be calculated first. Solve the two problems with the parentheses, and compare the answers to the same problems but without the parentheses.
