Science Experiments Fall Boots Tips:

Illustrated Guide to Home Forensic Science Experiments Robert Bruce Thompson, Barbara Fritchman

Thompson, 2012-08-08 Have you ever wondered whether the forensic science you've seen on TV is anything like the real thing? There's no better way to find out than to roll up your sleeves and do it yourself. This full color book offers advice for setting up an inexpensive home lab and includes more than 50 hands-on lab sessions that deal with forensic science experiments in biology, chemistry, and physics. You'll learn the practical skills and fundamental knowledge needed to pursue forensics as a lifelong hobby or even a career. The forensic science procedures in this book are not merely educational; they're the real deal. Each chapter includes one or more lab sessions devoted to a particular topic. You'll find a complete list of equipment and chemicals you need for each session. Analyze soil, hair, and fibers. Match glass and plastic specimens. Develop latent fingerprints and reveal blood traces. Conduct drug and toxicology tests. Analyze gunshot and explosives residues. Detect forgeries and fakes. Analyze impressions such as tool marks and footprints. Match pollen and diatom samples. Extract, isolate, and visualize DNA samples. Through their company, The Home Scientist LLC, thehomescientist.com, the authors also offer inexpensive custom kits that provide specialized equipment and supplies you'll need to complete the experiments. Add a microscope and some common household items and you're good to go.

Ethical Issues in Scientific Research Edward Erwin, Sidney Gendin, Lowell Kleiman, 2015-12-22 First published in 1994, this is Volume 2 of a selection of studies in Applied Ethics focusing on ethical issues in scientific research in aid to support students when applying ethics to their research training courses. The need for these courses expresses the recognition that the ethical dimensions of various types of scientific research greatly affect the general population and therefore require serious study and debate. This collection of essays addresses the major areas of moral debate regarding research fraud and deception, controlled experiments on humans, animal and genetic research, IQ, and military research. The essays collected here represent the best efforts to date of philosophers and scientists to grapple with these interesting and difficult issues.
