Bottom Line, Personal ,1997

Physical Education James Naismith,Luther Halsey Gulick,1892

The Effects of Lunar Gravity on Metabolic Rates W. G. Robertson,E. C. Wortz,1968 Experiments were conducted to determine the effects of simulated lunar gravity simulation was accomplished using a modified gravity on the metabolic cost of work in both the A 5 L and the RX 2 full pressure suits Hewes and Spady inclined plane simulator and a 6 degree of freedom DOF suspension simulator were instrumented for determining metabolic rates data were collected for walking and upper torso exercises during ventilated and pressurized modes of operation for each suit Results show that the metabolic rates for walking are lower in the 1 6 g environment than in the 1 g environment There were no significant differences in the energy costs of walking between the RX 2 and the A 5 L pressure suits at 1 6 g with the suits pressurized Pressurization results in a slight but significant increase in metabolic rate in the RX 2 Pressurization of the A 5 L results in a significant increase in metabolic rate in all exercise modes in each simulator There were no significant differences between suits while performing upper torso tasks in the pressurized mode during 1 6 g simulation Metabolic rates however were significantly lower in the 6 DOF gimbal simulator than in the inclined plane simulation An increase in the number of degrees of freedom results in a decrease in the cost of exercise both

walking and upper torso These suits show no differences in the metabolic cost of exercise in the 1.6 g environment
