landscape Artificial Intelligence in Cardiothoracic Imaging Carlo N. De Cecco, Marly van Assen, Tim Leiner, 2022-04-22
This book provides an overview of current and potential applications of artificial intelligence AI for cardiothoracic imaging. Most AI systems used in medical imaging are data driven and based on supervised machine learning. Clinicians and AI specialists can contribute to the development of an AI system in different ways focusing on their respective strengths. Unfortunately, communication between these two sides is far from fluent and from time to time they speak completely different languages. Mutual understanding and collaboration are imperative because the medical system is based on physicians' ability to take well informed decisions and convey their reasoning to colleagues and patients. This book offers unique insights and informative chapters on the use of AI for cardiothoracic imaging from both the technical and clinical perspective. It is also a single comprehensive source that provides a complete overview of the entire process of the development and use of AI in clinical practice for cardiothoracic imaging. The book contains chapters focused on cardiac and thoracic applications as well as more general topics on the potentials and pitfalls of AI in medical imaging. Separate chapters will discuss the valorization regulations surrounding AI, cost effectiveness and future perspective for different countries and continents. This book is an ideal guide for clinicians, radiologists, cardiologists, etc. interested in working with AI, whether in a research setting developing new AI applications or in a clinical setting using AI algorithms in clinical practice. The book also provides clinical insights and overviews for AI specialists who want to develop clinically relevant AI applications.
