As Lossim decides to investigate his teacher's mysterious disappearance, he discovers how evil people can turn because of worshipping the Seven Deadly Sins. The boy battles; discovers he is a righteous person far less corruptible than most other people thanks to the Guiders of the Galaxy. He finally understands people far better and fights sin. It is the beginning of the end for the Orion Republic, the dawn of the Kingdom. How will people colonize more planets in the Milky Way? Choosing evil or good? And what are the consequences? **Connecting Physics**

Education Research and Practice Italo Testa, Marisa Michelini, Salvatore Esposito, 2025-08-15. This book presents a selection of the most recent research results from the Italian physics education research community aimed at enhancing the teaching and learning of physics. The motivation for this publication arises from the lack of a comprehensive reference for teachers on research results in physics education. Despite various physics curriculum reform initiatives such as the introduction of modern physics into high school curricula, their effectiveness in improving the quality of physics teaching in schools has been limited. The book offers a contextualized view of the main topics in physics education along with a comprehensive overview of the current challenges faced by physics education in Italy and abroad. It also presents research findings that could potentially enhance students' learning of physics. Throughout the book, the implications of these studies are outlined, acknowledging issues and knowledge gaps that will guide future research in physics education. Specifically, rather than covering all the contents addressed in the physics curriculum, the book presents research contributions that suggest potentially effective strategies, methods, and practices at different school levels, from primary school to secondary school and university level. Regarding physics content, the book presents teaching proposals highlighting conceptual aspects and exemplary methodologies of interpretation in physics, such as the physics of fluids and quantum mechanics. It also includes research contributions on different methods and proposals for implementing practical activities reflecting on the role of the laboratory in learning the discipline and providing examples of integrating experimental and cognitive skills. The book also addresses the role of affective variables such as physics identity, self-efficacy, and attitudes toward physics in the learning process. Additionally, studies on teachers' professional development are presented, which can inform the design of proposals for educational paths and methods within a framework of close collaboration between schools and physics.
