Business Under Crisis, Volume II Demetris Vrontis, Alkis Thrassou, Yaakov Weber, S. M. Riad Shams, Evangelos Tsoukatos, Leonidas Efthymiou, 2021-11-30 Crises present significant challenges for organizations But while critical events are inevitable not every business is sufficiently equipped for when things don't go according to plan This book focuses on business under crisis

conditions along with organizational responses and adaptation. Adaptation can be seen as a learning process. It encompasses meaningful ways that help companies sustain their viability over the long term. Companies that respond quickly often achieve more than just surviving. Some organizations will learn from a crisis, develop reactive resilience, and emerge stronger from the period of turbulence. They will be able to explore possibilities and create new patterns of relationships. Bringing together descriptive and prescriptive research studies, chapters explore adaptation in different sectors including public health, tourism, garment, Information Technology, high tech companies, global trade networks, hospitality, security, and the social sector. Ultimately, the book covers a wide range of topics linking strategy, entrepreneurship, and leadership to reciprocal organizational adaptations that help us delineate crisis as well as its interconnections in differing settings. *Die Anwendung des*

Physio-logging in Humans: Recent Advances and Limitations in Wearable Devices for Biomedical Applications Mohammad Yavarimanesh, Colin K. Drummond, Cederick Landry, 2025-08-29. The recent advancements in wearables, nearables, and machine learning have paved the way for unparalleled approaches to monitoring physiological parameters. These approaches show great potential in studying human physiology during daily life as well as in extreme conditions such as astronaut monitoring and human performance. In addition, wearables and recent advances in physio-logging can alleviate the impact of numerous diseases and medical conditions globally and therefore have the potential to reduce the cost of healthcare and increase patients' quality of life. Noteworthy strides have already been accomplished, evoking enthusiasm among patients and researchers alike, but very few wearable solutions have reached their anticipated potential due to many limitations such as sensor interoperability, fit, comfort, adverse reaction to wearables, lack of design standards, and validation guidelines. By curating an article collection that brings together explored avenues to monitor physiological parameters that did or did not work, it is anticipated that further progress in the field can be accelerated. **Federal Program Evaluations**, United States.
