In Detail

Machine learning the art of creating applications that learn from experience and data has been around for many years Python is quickly becoming the go to language for analysts and data scientists due to its simplicity and flexibility moreover within the Python data space scikit learn is the unequivocal choice for machine learning

The course combines an introduction to some of the main concepts and methods in machine learning with practical hands on examples of real world problems

The course starts by walking through different methods to prepare your data be it a dataset with missing values or text columns that require the categories to be turned into indicator variables

After the data is ready you ll learn different techniques aligned with different objectives be it a dataset with known outcomes such as sales by state or more complicated problems such as clustering similar customers

Finally you ll learn how to polish your algorithm to ensure that it s both accurate and resilient to new datasets

You will learn to incorporate machine learning in your applications

Ranging from handwritten digit recognition to document classification examples are solved step by step using scikit learn and Python

By the end of this course you will have learned how to build applications that learn from experience by applying the main concepts and techniques of machine learning

Style and Approach

Implement scikit learn using engaging examples and fun exercises and with a gentle and friendly but comprehensive learn by doing approach

This is a practical course which analyzes compelling data about life health and death with the help of tutorials
