Data and computation modeling for scientific problem solving environments , An Assessment of the Science Proposed for the Deep Underground Science and Engineering Laboratory (DUSEL) National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Ad Hoc Committee to Assess the Science Proposed for a Deep Underground Science and Engineering Laboratory (DUSEL), 2012-02-02 According to the big bang theory our Universe began in a state of unimaginably high energy and density contained in a space of subatomic dimensions At that time unlike today the fundamental forces of nature were presumably unified and the particles present were interacting at energies not attainable by present day accelerators Underground laboratories provide the conditions to investigate processes involving rare phenomena in matter and to detect the weak effects of highly elusive particles by replicating similar environments to those once harnessed during the earliest states of the Earth These laboratories now appear to be the gateway to understanding the physics of the grand unification of the forces of nature Built to shield extremely sensitive detectors from the noise of their surroundings and the signals associated with cosmic rays underground facilities have been established during the last 30 years at a number of sites worldwide To date the United States efforts to develop such facilities have been modest and consist primarily of small underground laboratories However the U S underground community has pushed for larger underground facilities on the scale of major laboratories in other countries An Assessment of the Deep Underground Science and Engineering Laboratory DUSEL addresses this matter by evaluating the major physics questions and experiments that could be explored with the proposed DUSEL Measuring the potential impact this assessment also examines the broader effects of the DUSEL in regards to education and public outreach and evaluates the need associated with developing U S programs similar to science programs in other regions of the world Scientific Satellites William R. The Century of Space Science J.A. Bleeker, Johannes Geiss, M. Huber, 2001 The 20th century can truly be called the Century of Space Science for it was in the 20th century that the multidisciplinary study of space science as opposed to astronomy was conceived Today as we start a new century of discovery we are able to cast our perspective back in order to chronicle how the field began review how it developed and discuss how it reached its current levels We are able to overview the historical development and to put early discoveries in context to document our current understanding and to look forward to the coming century with some degree of optimism One of the most attractive features of this young discipline is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection The work is published in two large format volumes and contains colour images throughout It includes several appendices for example a basic chronology of the field and a complete list of every space science mission ever launched and is extensively and comprehensively indexed The scientific editorial team consists of Johan A M Bleeker of SRON The Netherlands Johannes Geiss of the International Space Science Institute Berne and Martin Huber of ESA and history consultant Arturo Russo of the University of Palermo Italy
