Semiotic Engineering Methods for Scientific Research in HCI Clarisse Sieckenius de Souza, Carla Faria Leitão, 2022-06-01

Semiotic engineering was originally proposed as a semiotic approach to designing user interface languages. Over the years, with research done at the Department of Informatics of the Pontifical Catholic University of Rio de Janeiro, it evolved into a semiotic theory of human computer interaction HCI. It views HCI as computer-mediated communication between designers and users at interaction time. The system speaks for its designers in various types of conversations specified at design time. These conversations communicate the designers' understanding of who the users are, what they know, the users want or need to do, in which preferred ways, and why. The designers' message to users includes even the interactive language in which users will have to communicate back with the system in order to achieve their specific goals. Hence, the process is in fact one of communication about communication or metacommunication. Semiotic engineering has two methods to evaluate the quality of metacommunication in HCI: the semiotic inspection method SIM and the communicability evaluation method CEM. Up to now, they have been mainly used and discussed in technical contexts focusing on how to detect problems and how to improve the metacommunication of specific systems. In this book, Clarisse de Souza and Carla Leitão discuss how SIM and CEM, which are both qualitative methods, can also be used in scientific contexts to generate new knowledge about HCI. The discussion goes into deep considerations about scientific methodology, calling the reader's attention to the essence of qualitative methods in research and the kinds of results they can produce. To illustrate their points, the authors present an extensive case study with a free open source digital audio editor called Audacity. They show how the results obtained with a triangulation of SIM and CEM point at new research avenues, not only for semiotic engineering and HCI but also for other areas of computer science such as software engineering and programming.

Access to Scientific Research David J. Brown, 2015-11-13

The debate about access to scientific research raises questions about the current effectiveness of scholarly communication processes. This book explores from an independent point of view the current state of the STM publishing market, new publishing technologies and business models, as well as the information habit of researchers, the politics of research funders, and the demand for scientific research as a public good. The book also investigates the democratisation of science, including how the information needs of knowledge workers outside academia can be embraced in the future.
