

THE PROCESS OF MEIOSIS

Meiosis is a process in which a single cell divides two times to make four cells that each have half the original amount of genetic material. These cells are known as our sex cells, which are sperm in males and eggs in females.

STAGE		DESCRIPTION
Prophase 1		Chromosomes pair up and recombination occurs.
Metaphase 1		Chromosomes line up in the middle. Spindle fibers are formed and attached to centromeres.
Anaphase 1		Homologous chromosomes are pulled apart by spindle fibers.
Telophase 1/Cytokinesis		Cell pinches in the middle.
Prophase 2		Two daughter cells are formed.
Metaphase 2		In each daughter cell the chromosomes line up in the middle.
Anaphase 2		Sister chromatids are pulled apart by the spindle. Separated chromatids are not individual chromosomes.
Telophase 2/Cytokinesis		The cell pinches in the middle and cytokinesis is complete there are four granddaughter cells each with half a set of chromosomes.

Breaking concepts down into manageable sections and with diagrams and illustrations to cement understanding, exam preparation material is integrated to build student confidence and assessment potential. Directly linked to the Oxford Biology Course Book to extend and sharpen comprehension, this book supports maximum achievement in the course and assessment. Fully comprehensive and matched to the new 2014 syllabus. Concise and focused approach simplifies complex ideas, building truly confident understanding. Clear and explanatory style.

uses plenty of visuals to make each concept accessible easing comprehension Build a strong foundation of assessment skills strengthening potential with integrated exam questions Develop assessment confidence drawing on thorough assessment support and advice Clear and straightforward language

[A Guide to Teaching in the Active Learning Classroom](#) Paul Baeppler, J. D. Walker, D. Christopher Brooks, Kem Saichaie, Christina I. Petersen, 2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces
