Event Information Systems Markus Heuchert ,2021-04-15 Events are an essential element of society Advancing digital technologies and the ongoing globalization has put forward a variety of different business leisure or scientific events that need to be managed in order to take place As a result of the proliferation of digital technology IT systems are an indispensable part of this management process Amid this pandemic crisis these systems have become increasingly important due to the relocation of events into the virtual sphere Since every event entails different requirements event management systems need to be very flexible In contrast to other application systems this flexibility is needed during use as the requirements of future events are not known during the initial selection and roll out of the software This calls for an intensified dialogue between the business and IT to match technical possibilities with practical requirements Currently adequate means to support this dialogue are lacking To this end this dissertation presents a reference model that encompasses the essential processes and data structures in the domain In 36 application cases the reference model is instantiated and evaluated Practitioners and researchers are the intended audiences of this work Researchers may use it as a foundation to design novel IT artifacts in the domain Practitioners benefit from the first comprehensive tool to support the design and use of digital technology in event management

Fuzzy Logic and the Semantic Web Elie Sanchez,2006-02-20 These are exciting times in the fields of Fuzzy Logic and the Semantic Web and this book will add to the excitement as it is the first volume to focus on the growing connections between these two fields This book is expected to be a valuable aid to anyone considering the application of Fuzzy Logic to the Semantic Web because it contains a number of detailed accounts of these combined fields written by leading authors in several countries The Fuzzy Logic field has been

maturing for forty years These years have witnessed a tremendous growth in the number and variety of applications with a real world impact across a wide variety of domains with humanlike behavior and reasoning And we believe that in the coming years the Semantic Web will be major field of applications of Fuzzy Logic This book the first in the new series Capturing Intelligence shows the positive role Fuzzy Logic and more generally Soft Computing can play in the development of the Semantic Web filling a gap and facing a new challenge It covers concepts tools techniques and applications exhibiting the usefulness and the necessity for using Fuzzy Logic in the Semantic Web It finally opens the road to new systems with a high Web IQ Most of today s Web content is suitable for human consumption The Semantic Web is presented as an extension of the current web in which information is given well defined meaning better enabling computers and people to work in cooperation For example within the Semantic Web computers will understand the meaning of semantic data on a web page by following links to specified ontologies But while the Semantic Web vision and research attracts attention as long as it will be used two valued based logical methods no progress will be expected in handling ill structured uncertain or imprecise information encountered in real world knowledge Fuzzy Logic and associated concepts and techniques more generally Soft Computing has certainly a positive role to play in the development of the Semantic Web Fuzzy Logic will not supposed to be the basis for the Semantic Web but its related concepts and techniques will certainly reinforce the systems classically developed within W3C In fact Fuzzy Logic cannot be ignored in order to bridge the gap between human understandable soft logic and machine readable hard logic None of the usual logical requirements can be guaranteed there is no centrally defined format for data no guarantee of truth for assertions made no guarantee of consistency To support these arguments this book shows how components of the Semantic Web like XML RDF Description Logics Conceptual Graphs Ontologies can be covered with in each case a Fuzzy Logic focus First volume to focus on the growing connections between Fuzzy Logic and the Semantic Web Keynote chapter by Lotfi Zadeh The Semantic Web is presently expected to be a major field of applications of Fuzzy Logic It fills a gap and faces a new challenge in the development of the Semantic Web It opens the road to new systems with a high Web IQ Contributed chapters by Fuzzy Logic leading experts

Matt Doyle,2011-01-06 This book is intended for anyone starting out with

PHP programming If you ve previously worked in another programming language such as Java C or Perl you ll probably pick up the concepts in the earlier chapters quickly however the book assumes no prior experience of programming or of building Web applications That said because PHP is primarily a Web technology it will help if you have at least some knowledge of other Web technologies particularly HTML and CSS Many Web applications make use of a database to store data and this book contains three chapters on working with MySQL databases Once again if you re already familiar with databases in general and MySQL in particular you ll be able to fly through these chapters However even if you ve never touched a

database before in your life you should still be able to pick up a working knowledge by reading through these chapters
