Laboratory Manual for

Electronics via Waveform Analysis Edwin C. Craig, 2012-12-06 To the Instructor: The purpose of this laboratory manual is not just to help students to set up electronic circuits that function as they should. The important thing is the electronic concepts that the student learns in the process of setting up and studying these circuits. Quite often a student learns more electronics when he has to trouble shoot a circuit than when the circuit performs as it should when first built. It is unlikely that any students would be able to complete all of these experiments in one semester. The author believes that all students should have laboratory experiences with power supplies, amplifiers, oscillators, and integrated circuits. Additionally, laboratory experiments should be determined by the instructor. Therefore, you can choose those that you want done. Some students are more efficient in the laboratory than others. Therefore, some would be able to complete more experiments in a semester than others. Also, many of these experiments cannot be completed in one two-hour laboratory period. If space is available, the circuits could be left intact from one period to the next. Or you might want to select steps in an experiment that you want to delete. Neither the values of the components or the magnitudes of the power supplies as given in the instructions are critical. Therefore, you could in most cases change them if the ones recommended are not available.
