M.-C. Beuscart-Zéphir, 2013-09-04 Healthcare information technologies are now routinely deployed in a variety of healthcare contexts. These contexts differ widely but the smooth integration of IT systems is crucial so the design, implementation and evaluation of safe, effective, efficient and easy to adopt health informatics involves careful consideration of both human and organizational factors. This book presents the proceedings of the Context Sensitive Health Informatics CSHI conference held in Copenhagen, Denmark in August 2013. The theme of this year's conference is human and sociotechnical approaches. The Human Factors approach is distinctly design driven and aims to optimize performance, safety and users' sense of well-being associated with their use of a system through the application of user-centered systems design and evaluation. The papers and presentations included here are grouped under the topics: patients and IT usability; test and evaluation; work tasks and related contexts; human factors and simulation; and context and systems design and outline theories and models for studying contextual issues and insights related to how health information technologies can be better designed to accommodate different healthcare contexts. Healthcare organizations, health policy makers and regulatory bodies globally are starting to acknowledge this essential role of human and organizational factors for safe and effective health information technology. This book will be of interest to all those involved in improving the quality of healthcare worldwide. Dermatology, An Issue of Primary Care: Clinics in Office Practice

Updates on Clinical and Molecular Epidemiology of Tuberculosis Weimin Li, Haican Liu, Yang Yang, Hui Jiang, 2024-03-08 Addressing the tuberculosis (TB) epidemic is crucial to reduce morbidity mortality and health care burden Cases of confirmed drug-resistant TB have almost doubled over the past decade Drug resistance represents one of the leading causes of death among TB patients and is responsible for approximately one third of TB-related deaths worldwide which is associated with TB recurrence and transmission In recent years the emerging molecular epidemiology methods have attributed to better TB management For example in many settings studies using molecular epidemiology methods have demonstrated the recent transmission of *Mycobacterium tuberculosis* (M-TB) strains However the transmission patterns of drug-resistant TB in most low and middle income developing countries remain unclear Traditional transmission models based on clinical and epidemiological parameters were not sufficient to identify potential risk factors By using molecular epidemiology analysis further insights can be gained into the association between M-TB isolates and epidemic populations This makes molecular epidemiology studies effective measures to establish phylogenetic relationships with clinical patients identify clusters and track TB transmission Studies investigating clinical and molecular epidemiology will provide theoretical basis and scientific strategy for TB prevention and control We hope to address the TB-associated health care burden and the current insufficient or imprecise control strategies for TB management More importantly we would like to discuss more efficient approaches in this field with the development of molecular epidemiology method and share insights to reduce TB burden
