Ahmad, Syed Khalid Imam, 2015-10-19 This book brings a comprehensive treatise about obesity examining the measures that can be taken to stop and even reduce obesity if these right measures are taken in time Recent studies show that obesity is on the increase at an alarming rate especially in the industrialized and affluent countries A number of reasons have been put forward for this increase including life style choices over eating over use of commercially processed food addiction for fast food high caloric diet specially containing high levels of sugar and fat lack of exercise and sedentary life style Also genetic make up has been associated with obesity Obesity can lead to a variety of lethal diseases notably coronary heart disease cancer and diabetes These diseases account for the highest number of human death amongst all other causes There are also a number of other side effects associated with obesity including increased stress loss of intelligentsia pancreatitis premature birth and osteoarthritis In recent years media have been playing important roles in highlighting the lethality and damage caused by obesity nevertheless no significant effects can be seen in the population and obesity remains on the increase especially amongst children The editors believe that it is important that more education campaign and research are used to stop this increasing disease Stress Doppler Echocardiography Steve M. Teague, 2012-12-06 For almost 40 years a small but intense group of cardiovascular investigators have evaluated cardiac performance by measuring the mass velocity and acceleration of blood ejected from the left ventricle These studies reveal that energy is transferred from ventricle to blood very early in systole and that the left ventricle is characterized as an impulse generator Recent explosive developments in Doppler echocardiography have allowed study of the energetics of ventricular contraction through noninvasive acceleration velocity and volumetric flow measurements Compared against reference standards of ejection fraction dP/dt and instantaneous pressure gradient across the aortic valve Doppler acceleration and velocity measurements are highly sensitive to changes in ventricular performance Most patients seeking cardiovascular care present with coronary artery disease as a chief concern This book focuses upon identification of coronary disease presence and severity through the evaluation of left ventricular Doppler ejection responses to stress loading Chapters I through 4 detail basic research on the dynamics of left ventricular ejection in ischemic and nonischemic animal models Chapters 5 through 13 present clinical correlates of changes

in the Doppler systolic ejection pulse during exercise and under pharmacologic stress loading Angiographic anatomy thallium perfusion defects and radionuclear ejection fraction responses serve as reference standards Chapters 14 15 and 16 address applications of Doppler echocardiography during the stresses of brief coronary occlusion myocardial infarction and post infarction recovery while chapters 17 and 20 illustrate applications of stress Doppler techniques in valvular heart disease
