Bugarski,2022-08-18 Food technology has adopted new principles and practices that are rapidly changing the food sector

New foods are now available under more uniform standards and better quality control. Globalised food market offers opportunities for manufacturers to increase production and profit and at the same time consumers benefit from the choice of food products like never before. All this is possible only because of the innovations in the food sector. One of such innovations is encapsulation technology which aims to preserve food quality, enhance the sensorial properties of food and increase the efficiency in food processing. This book discusses the uses of encapsulation technology in food practices and conventional processes and also highlights new directions in food processing. In the introductory chapters, review of encapsulation technologies, carrier materials and criteria for their selection, analytical methods for characterisation of encapsulated products and some aspects of product design and process optimisation. The most important achievements of encapsulation technology in the food sector are reviewed in the later chapters related to encapsulation of food ingredients, food biocatalysts and examples of usage of encapsulated active ingredients in the dairy and meat industry, beverage production etc. In addition, the implementation of nanotechnology in the food sector is reviewed, emphasizing the most important materials and technologies for the production of nanoencapsulates. The book is a valuable source of information on encapsulation technology for academia and industry, especially the food sector, with the aim of enhancing knowledge transfer.

**New Polymers for Encapsulation of Nutraceutical Compounds** Jorge Carlos Ruiz Ruiz, Maira Rubi Segura Campos, 2017-01-24

The incorporation of functional ingredients in a given food system and the processing and handling of such foods are associated with nutritional challenges for their healthy delivery. The extreme sensitivity of some components cause significant loss of product quality, stability, nutritional value and bioavailability and the overall acceptability of the food product. Consequently, encapsulation has been successfully used to improve stability and bioavailability of functional ingredients. Encapsulation is one example of technology that has the potential to meet the challenge of successfully incorporating and delivering functional ingredients into a range of food types. The book will cover topics about:

1. Characterization of novel polymers and their use in encapsulation processes
2. Stability of nutraceutical compounds encapsulated with novel polymers
3. Application of encapsulated compounds with novel polymers in functional food systems

This book provides a detailed overview of technologies for preparing and characterisation of encapsulates for food active ingredients using modified polymers. The use of modified polymers as coating materials is a field that still needs study. The book is aimed to inform students and researchers in the areas of food science and food technology and professionals in the food industry.
