Agent-Based Modelling in Population Studies André Grow, Jan Van Bavel, 2016-08-11 This book examines the use of agent based modelling ABM in population studies from concepts to applications best practices to future developments It features papers written by leading experts in the field that will help readers to better understand the usefulness of ABM for population projections how ABM can be injected with empirical data to achieve a better match between model and reality how geographic information can be fruitfully used in ABM and how ABM results can be reported effectively and correctly Coverage ranges from detailing the relation between ABM and existing paradigms in population studies to infusing agent based models with empirical data The papers show the benefits that ABM offers the field including enhanced theory formation by better linking the micro level with the macro level the ability to represent populations more adequately as complex systems and the possibility to study rare events and the implications of alternative mechanisms in artificial laboratories In addition readers will discover guidelines and best practices with detailed examples of how to apply agent based models in different areas of population research including human mating behaviour migration and socio structural determinants of health behaviours Earlier versions of the papers in this book have been presented at the workshop Recent Developments and Future Directions in Agent Based Modelling in Population Studies which took place at the University of Leuven KU Leuven Belgium in September 2014 The book will contribute to the development of best practices in the field and will provide a solid point of reference for scholars who want to start using agent based modelling in their own research

Complex Systems Modeling and Simulation in Economics and Finance Shu-Heng Chen, Ying-Fang Kao, Ragupathy Venkatachalam, Ye-Rong Du, 2018-11-20 This title brings together frontier research on complex economic systems heterogeneous interacting agents bounded rationality and nonlinear dynamics in economics The book contains the proceedings of the CEF2015 21st Computing in Economics in Finance held 20-22 June 2015 in Taipei Taiwan and addresses some of the important driving forces for various emergent properties in economies when viewed as complex systems The breakthroughs reported in this book are a result of an interdisciplinary approach and simulation remains the unifying theme for these papers as they deal with a wide range of topics in economics The text is a valuable addition to the efforts in promoting the complex systems view in economic science The computational experiments reported in the book are both transparent and replicable Complex System Modeling and Simulation in Economics and Finance is useful for graduate courses of complex systems with particular focus on economics and finance At the same time it serves as a good overview for researchers who are interested in the topic *Hospitality Upgrade*, 2006 [Handbook of Research on Digital Transformation Management and Tools](#) Pettinger, Richard, Gupta, Brij B., Roja, Alexandru, Cozmiuc, Diana, 2022-06-30 Advances in digital technologies continue to impact all areas of life including the business sector Digital transformation is ascertained to usher in the digitalized economy and involves new concepts and management tools that must be considered in

the context of management science and practice For business leaders to ensure their companies remain competitive and relevant it is essential for them to utilize these innovative technologies and strategies The Handbook of Research on Digital Transformation Management and Tools highlights new digital concepts within management such as digitalization and digital disruption and addresses the paradigm shift in management science incurred by the digital transformation towards the digitalized economy Covering a range of important topics such as cultural economy online consumer behavior sustainability and social media this major reference work is crucial for managers business owners researchers scholars academicians practitioners instructors and students

Managing Business Complexity Michael J. North, Charles M. Macal, 2007-03-01 Agent based modeling and simulation ABMS a way to simulate a large number of choices by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making Managing Business Complexity is the first complete business oriented agent based modeling and simulation resource It has three purposes first to teach readers how to think about ABMS that is about agents and their interactions second to teach readers how to explain the features and advantages of ABMS to other people and third to teach readers how to actually implement ABMS by building agent based simulations It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter It is also a collection of ABMS business applications resources all assembled in one place for the first time In short Managing Business Complexity addresses who needs ABMS and why where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models

Finanzmarktsimulation mit Multiagentensystemen Michael Heun, 2008-02-28 Michael Heun entwickelt ein Framework als Grundlage f r die Finanzmarktsimulation mit Multiagentensystemen Der Fokus liegt dabei auf der Offenheit des Frameworks sodass unterschiedlichste Marktformen und Marktteilnehmertypen einbezogen werden k nnen

Models of Society and Complex Systems Sebastian Ille, 2022-11-24 Models of Society and Complex Systems introduces readers to a variety of different mathematical tools used for modelling human behaviour and interactions and the complex social dynamics that drive institutions conflict and coordination What laws govern human affairs How can we make sense of the complexity of societies and how do individual actions characteristics and beliefs interact Social systems follow regularities which allow us to answer these questions using different mathematical approaches This book emphasises both theory and application It systematically introduces mathematical approaches such as evolutionary and spatial game theory social network analysis agent based modelling and chaos theory It provides readers with the necessary theoretical background of each toolset as well as the

underlying intuition while each chapter includes exercises and applications to real world phenomena By looking behind the surface of various social occurrences the reader uncovers the reasons why social systems exhibit both cultural universals and at the same time a diversity of practices and norms to a degree that even surpasses biological variety or why some riots turn into revolutions while others do not even make it into the news This book is written for any scholar in the social sciences interested in studying and understanding human behaviour social dynamics and the complex systems of society It does not expect readers to have a particular background apart from some elementary knowledge and affinity for mathematics

Introduction to Modeling for Biosciences David J. Barnes, Dominique Chu, 2010-07-23 Mathematical modeling can be a useful tool for researchers in the biological scientists Yet in biological modeling there is no one modeling technique that is suitable for all problems Instead different problems call for different approaches Furthermore it can be helpful to analyze the same system using a variety of approaches to be able to exploit the advantages and drawbacks of each In practice it is often unclear which modeling approaches will be most suitable for a particular biological question a problem which requires researchers to know a reasonable amount about a number of techniques rather than become experts on a single one *Introduction to Modeling for Biosciences* addresses this issue by presenting a broad overview of the most important techniques used to model biological systems In addition to providing an introduction into the use of a wide range of software tools and modeling environments this helpful text reference describes the constraints and difficulties that each modeling technique presents in practice enabling the researcher to quickly determine which software package would be most useful for their particular problem Topics and features introduces a basic array of techniques to formulate models of biological systems and to solve them intersperses the text with exercises throughout the book includes practical introductions to the Maxima computer algebra system the PRISM model checker and the Repast Simphony agent modeling environment discusses agent based models stochastic modeling techniques differential equations and Gillespie's stochastic simulation algorithm contains appendices on Repast batch running rules of differentiation and integration Maxima and PRISM notation and some additional mathematical concepts supplies source code for many of the example models discussed at the associated website <http://www.cs.kent.ac.uk/imb> This unique and practical guide leads the novice modeler through realistic and concrete modeling projects highlighting and commenting on the process of abstracting the real system into a model Students and active researchers in the biosciences will also benefit from the discussions of the high quality tried and tested modeling tools described in the book Dr David J Barnes is a lecturer in computer science at the University of Kent UK with a strong background in the teaching of programming Dr Dominique Chu is a lecturer in computer science at the University of Kent UK He is an internationally recognized expert in agent based modeling and has also in depth research experience in stochastic and differential equation based modeling
