Nene The Hawaiian Goose:

The Hawaiian Goose Janet Kear,A.J Berger,2010-09-30 Dr Janet Kear Assistant Director of the Wildfowl Trust and Curator of its Martin Mere Reserve and Professor Andrew Berger of the University of Hawaii have written a timely and absorbing account of the recent history of the Hawaiian Goose or Nene its descent to near extinction its eleventh hour rescue and current restoration to the wild The species declined from an estimated population of 25 000 in Hawaii in the 18th century to less than fifty birds in the 1940s Today thanks largely to the extended breeding programmes at Slimbridge and Pohakuloa there are probably more than 2000 Hawaiian Geese in the world The achievement is justly applauded and well known but whether this impressive experiment in conservation has been truly successful will not be clear until it becomes evident that the released birds can maintain a breeding population in the wild As the authors explain the outcome is far from predictable The causes which led to the species decline and the hazards and difficulties faced by the reintroduced population are discussed at length but the core of the book is the propagation programmes at Slimbridge and Pohakuloa and the problems and successes they brought during many years of patient work For the conservationist and aviculturalist the accounts of captive breeding under headings such as infertility diet longevity mortality and the effects of foster mothers geographical latitude and genetic strain will be essential reading Appropriately Sir Peter Scott whose interest and involvement in the rescue of the Hawaiian Goose was of prime importance is one of the artists whose drawings supplement the text There is also a colour frontispiece and 24 monochrome plates EndFragment
