Nerve Growth Factors Robert A. Rush, 1989 The aim of this volume is to provide those working in the field of nerve growth factors with a detailed and accurate description of the techniques now available to explore the nature range and mechanisms of the action of established or putative nerve growth factors *Neurotrophins and the Neural Crest* Maya Sieber-Blum, 1998-06-29 The target of much current research the neural crest is a transitory tissue of the vertebrate embryo that gives rise to many diverse structures in the adult organism including the autonomic nervous system the enteric nervous system and most primary sensory ganglia among other cell types and tissues Reflecting recent investigations Neurotrophins and the Neural Crest is dedicated to the roles neurotrophins play in neural crest cell differentiation and in the survival of neural crest derivatives This timely book correlates in vitro data with results obtained from knock out mice with targeted neurotrophin or receptor deletions with the goal of determining the fidelity and usefulness of various experimental culture systems It also covers embryonic expression patterns and functions of neurotrophins and their receptors Chapters are organized to begin with neural crest derived tissues as sources for experimental material including sensory neurons sympathetic neurons enteric neurons melanocytes and calcitonin producing cells from the thyroid and concludes with discussions of the neural crest cells A broad range of researchers and scientists involved in growth factors neuroscience developmental and cell biology embryology and many other fields will find that Neurotrophins and the Neural Crest targets this fast moving area of research completely and concisely **Sensory Mechanisms of the Spinal Cord** William D. Willis Jr., Richard E. Coggeshall, 2004-01-31 The third edition of this monograph continues to have the goal of providing an overview of current thought about the spinal cord mechanisms that are responsible for sensory processing We hope that the book is of value to both basic and clinical neuroscientists Several changes have been made in the presentation as well as additions because of the research advances that have been made during the past decade Chapters 3 and 4 in the previous edition have been subdivided and now the morphology of primary afferent neurons of the dorsal root ganglia is described in Chapter 3 and the chemical neuroanatomy 4 The description of the dorsal horn in the previous Chapter 4 of these neurons in Chapter is now included in Chapter 5 and the chemical neuroanatomy of the dorsal horn in Chapter 6 Furthermore discussions of the descending control systems have now been of Chapter 12 consolidated at the end The authors would like to express their appreciation for the help provided by several individuals R E C wishes to acknowledge the many things he learned about primary afferent neurons from conversations with Dr S N Lawson He also thanks Lyn Shilling for her assistance with the typing WDW thanks Dr Nada Lawand for her critical reading of parts of the manuscript Rosaline Leigh for help with the manuscript and Griselda Gonzales for preparing the illustrations Cell Transplantation , 1996 Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1990 The FASEB Journal , 1989 **Neural Regeneration and**

Written by molecular biologists and neurobiologists this volume in the Handbook Series provides basic step by step protocols in addition to specialist techniques to support those practising in situ hybridization a powerful histochemical technique which is now widely used in neurobiology The first part of the manual concentrates on basic procedures eg which probe and label to select equipment relevant molecular biological techniques hazards probe preparation and labelling tissue preparation and conditions for hybridization Specialist procedures including quantitative analysis of data reverse transcription PCR working with human tissue and double label methods are presented in subsequent sections In Situ Hybridization Techniques for the Brain is therefore an essential reference source for all those with research interests in neuroanatomy histopathology and or neurohistochemistry and will support users in both the preparation and successful completion of the procedures in their own laboratory *Generation of Antibodies by Cell and Gene Immobilization* Cox Terhorst, Alberto Albertini, Fabio Malavasi, 1993 *The Central Nervous System of Vertebrates* Rudolf Nieuwenhuys, Hans J. ten Donkelaar, Charles Nicholson, 2014-11-14 This comprehensive reference is clearly destined to become the definitive anatomical basis for all neuroscience research The book provides a complete overview and comparison of the structural organization of all vertebrate groups ranging from amphioxus and lamprey through fishes amphibians and birds to mammals The large specialised section of the work devoted to the CNS of the various vertebrate groups is preceded by introductory chapters on neurons cell masses fibre tracts morphogenesis methodology and techniques Although focusing on structure the authors provide functional correlations throughout This monumental work is and will remain unique the only source of such brilliant illustrations at both the macroscopic and microscopic levels **The Neuron in Tissue Culture** L. W. Haynes, 1999-02-22 This volume in the Handbook Series contains 73 contributions from experts in the range of fields to which neuronal tissue culture may be applied Twenty two keynote chapters contain methods well illustrated with data from the contributing authors laboratories which exemplify landmark applications of the technique Three further tutorial chapters review artefacts of the tissue culture environment the understanding and control of neuronal apoptosis in vitro and the culture substratum The volume concludes with five chapters containing short protocols describing systematically the maintenance and propagation of neurons from mammalian and avian peripheral and central nervous systems stem cell populations invertebrate neurons and finally selected organised and reconstruction techniques which are given prominent treatment throughout the book The Neuron in Tissue Culture is a comprehensive reference source dealing exclusively with the tissue culture of neurons It is essential reading for all those with research interests in neuroscience including developmental biologists neurologists nerve cell physiologists and neuropharmacologists *Carpenter's Human Neuroanatomy* André Parent, 1996 Microreconstruction of Nerve Injuries Julia K.
