Data Warehousing and Knowledge Discovery Il-Yeol Song, 2008-08-18 This book constitutes the refereed proceedings of the 10th International Conference on Data Warehousing and Knowledge Discovery DaWak 2008 held in Turin Italy in September 2008 The 40 revised full papers presented were carefully reviewed and selected from 143 submissions The papers are organized in topical sections on conceptual design and modeling olap and cube processing distributed data warehouse data privacy in data warehouse data warehouse and data mining clustering mining data streams classification text mining and taxonomy machine learning techniques and data mining applications [Oracle Exadata and Netezza TwinFin Compared](#) Phil Francisco, 2011-08-31 Netezza focuses on technology designed to query and analyze big data The company's innovative data warehouse appliances are disrupting the market Wishing to exploit data at lower costs of operation and ownership many of our customers have moved their data warehouses from Oracle Oracle has now brought Exadata to market a machine which apparently does everything TwinFin does and also processes online transactions This examination of Exadata and TwinFin as data warehouse platforms is written from an unashamedly Netezza viewpoint however to ensure credibility we have taken advice from Philip Howard Research Director of Bloor Research and Curt Monash President Monash Research To innovate requires us to think and do things differently solving a problem using new approaches Netezza focuses exclusively on customers needs and wants for data warehousing TwinFin delivers excellent performance for our customers warehouse queries TwinFin offers customers simplicity anyone with basic knowledge of SQL and Linux has the skills needed to perform the few administrative tasks required to maintain consistent service levels through dynamically changing workloads TwinFin's performance with simplicity reduces their costs of owning and running their data warehouses More important our customers create new business value by deploying analytic applications which previously they considered beyond their reach Netezza was part of the inspiration for Exadata Teradata was part of the inspiration for Exadata acknowledged Larry Ellison

on January 27 2010 We d like to thank them for forcing our hand and forcing us go into the hardware business While delivered with Larry Ellison s customary pizzazz there is a serious point to his comment only the best catch Oracle s attention Exadata represents a strategic direction for Oracle adapting their OLTP database management system partnering it with a massively parallel storage system from Sun Oracle launched Exadata V2 with the promise of extreme performance for processing both online transactions and analytic queries That Oracle excels at OLTP is a given But data warehousing and analytics make very different demands of their software and hardware than OLTP Exadata s data warehousing credentials demand scrutiny particularly with respect to simplicity and value This eReport opens by reviewing differences between processing online transactions and processing queries and analyses in a data warehouse It then discusses Exadata and TwinFin from perspectives of their query performance simplicity of operation and value All we ask of readers is that they do as our customers and partners have done put aside notions of how a database management system should work be open to new ways of thinking and be prepared to do less not more to achieve a better result One caveat Netezza has no direct access to an Exadata machine We are fortunate in the detailed feedback we receive from many organizations that have evaluated both technologies and selected TwinFin Given Oracle s size and their focus on Exadata publicly available information on Exadata is surprisingly scarce The use cases quoted by Oracle provide little input to the discussion which in itself is of concern to several industry followers e g Information Week The information shared in this paper is made available in the spirit of openness Any inaccuracies result from our mistakes not an intent to mislead

Big Data Systems Jawwad Ahmed Shamsi,Muhammad Ali Khojaye,2021-05-10 Big Data Systems encompass massive challenges related to data diversity storage mechanisms and requirements of massive computational power Further capabilities of big data systems also vary with respect to type of problems For instance distributed memory

systems are not recommended for iterative algorithms. Similarly, variations in big data systems also exist related to consistency and fault tolerance. The purpose of this book is to provide a detailed explanation of big data systems. The book covers various topics including Networking, Security, Privacy, Storage, Computation, Cloud Computing, NoSQL, and NewSQL systems, High Performance Computing, and Deep Learning. An illustrative and practical approach has been adopted in which theoretical topics have been aided by well-explained programming and illustrative examples. Key Features: Introduces concepts and evolution of Big Data technology; Illustrates examples for thorough understanding; Contains programming examples for hands-on development; Explains a variety of topics including NoSQL Systems, NewSQL systems, Security, Privacy, Networking, Cloud, High Performance Computing, and Deep Learning; Exemplifies widely used big data technologies such as Hadoop and Spark; Includes discussion on case studies and open issues; Provides end-of-chapter questions for enhanced learning.

Data Warehousing and Knowledge Discovery Mukesh K. Mohania, A Min Tjoa, 2009-08-28. Data warehousing and knowledge discovery are increasingly becoming mission-critical technologies for most organizations, both commercial and public, as it becomes increasingly important to derive important knowledge from both internal and external data sources. With the ever-growing amount and complexity of the data and information available for decision-making, the process of data integration, analysis, and knowledge discovery continues to meet new challenges, leading to a wealth of new and exciting research challenges within the area. Over the last decade, the International Conference on Data Warehousing and Knowledge Discovery (DaWaK) has established itself as one of the most important international scientific events within data warehousing and knowledge discovery. DaWaK brings together a wide range of researchers and practitioners working on these topics. The DaWaK conference series thus serves as a leading forum for discussing novel research results and experiences within data warehousing and knowledge discovery. This year's conference, the 11th International Conference on Data Warehousing and Knowledge Discovery (DaWaK 2009), continued the tradition by disseminating and discussing innovative models, methods, algorithms, and solutions to the challenges faced by data warehousing and knowledge discovery technologies.

Research Anthology on Big Data Analytics, Architectures, and Applications Management Association, Information Resources, 2021-09-24. Society is now completely driven by data, with many industries relying on data to conduct business or basic functions within the organization. With the efficiencies that big data bring to all institutions, data is continuously being collected and analyzed. However, data sets may be too complex for traditional data processing, and therefore, different strategies must evolve to solve the issue. The field of big data works as a valuable tool for many different industries. The *Research Anthology on Big Data Analytics, Architectures, and Applications* is a complete reference source on big data analytics that offers the latest innovative architectures and frameworks and explores a variety of applications within various industries. Offering an international perspective, the applications discussed within this anthology feature global representation. Covering topics such as advertising, curricula-driven supply chain, and smart cities, this research anthology is
