Gusella,1995-11-30 The prevailing orthodoxy according to which all macroeconomic theory should be reducible to microeconomics is criticized Such a dogma excludes from economics the creation of new knowledge which as distinguished from the mere transmission of knowledge in education and training is a social process not reducible to microeconomics A mathematical extension of the Lucas theory to allow for the effects of creation of knowledge upon economic development is shown to improve essentially the prediction of business cycle data when compared with the conventional real business cycle models of Kydland and Prescott Hansen and Rogerson and Danthine and Donaldson **The Semantic Web** Bo

Leuf,2006-02-22 The Semantic Web is an idea of World Wide Web inventor Tim Berners Lee that the Web as a whole can be made more intelligent and perhaps even intuitive about how to serve a users needs Although search engines index much of the Web s content they have little ability to select the pages that a user really wants or needs Berners Lee foresees a number of ways in which developers and authors singly or in collaborations can use self descriptions and other techniques so that the context understanding programs can selectively find what users want The Semantic Web Crafting Infrastructure for Agency presents a more holistic view of the current state of development and deployment This a comprehensive reference to the rapidly developing technologies which are enabling more intelligent and automated transactions over the internet and a visionary overview of the implications of deploying such a layer of infrastructure A through examination of the Semantic Web including the following topics web information management languages and protocols application and tools and collaboration and agency A unique volume of practical information in depth analysis conceptual overviews and contextual material from professionals in the field Features appendices of technical terms and glossary Semantic Web resources intellectual property issues and lists of elements This is essential reading for engineers web developers and industry professionals wishing to enhance their knowledge of recent developments Management staff lecturers postgraduate and undergraduate students will also find this book appealing Semantic Web Tassilo Pellegrini,Andreas Blumauer,2007-02-13 Semantic Web ist Vision

networking of microprocessors promise a day when networked computers are embedded throughout the everyday world. However, our current understanding of what such systems would be like is insufficient to bring the promise to reality. *Embedded Everywhere* explores the potential of networked systems of embedded computers and the research challenges arising from embedding computation and communications technology into a wide variety of applications from precision agriculture to automotive telematics to defense systems. It describes how these emerging networks operate under unique constraints not present in more traditional distributed systems such as the Internet. It articulates how these networks will have to be dynamically adaptive and self-configuring and how new models for approaching programming and computation are necessary. Issues relating to trustworthiness, security, safety, reliability, usability, and privacy are examined in light of the ubiquitous nature of these systems. A comprehensive systems-oriented research agenda is presented along with recommendations to major federal funding agencies.

Networking the World, 1794-2000 Armand Mattelart,2000 In the age of satellites and the Internet worldwide communication has become increasingly unified amid overblown claims about the redemptive possibilities of international networks But this rhetoric is hardly new As Armand Mattelart demonstrates in *Networking the World 1794 2000* globalization and its attendant hype have existed since road and rail were the fastest way to move information Mattelart places contemporary global communication networks into historical context and shows that the networking of the world began much earlier than many assume in the late eighteenth century He argues that the internationalization of communication was spawned by such Enlightenment ideals as universalism and liberalism and examines how the development of global communications has been inextricably linked to the industrial revolution modern warfare and the emergence of nationalism Throughout Mattelart eloquently argues that discourses of better living through globalization often mask projects of political economic and cultural domination
