Governing by Design Aggregate Architectural History Collaborative, 2012-04-29 Governing by Design offers a unique perspective on twentieth century architectural history It disputes the primacy placed on individuals in the design and planning process and instead looks to the larger influences of politics culture economics and globalization to uncover the roots of how our built environment evolves In these chapters historians offer their analysis on design as a vehicle for power and as a mediator of social currents Power is defined through a variety of forms modernization obsolescence technology capital ergonomics biopolitics and others The chapters explore the diffusion of power through the establishment of norms and networks that frame human conduct action identity and design They follow design as it functions through the body in the home and at the state and international level Overall Aggregate views the intersection of architecture with the human need for what Foucault termed governmentality societal rules structures repetition and protocols as a way to provide security and tame risk Here the conjunction of power and the power of design reinforces governmentality and infuses a sense of social permanence despite the exceedingly fluid nature of societies and the disintegration of cultural memory in the modern era

Basics Design Ideas Bert Bielefeld, Sebastian El khouli, 2021-09-07 Design Ideas offers students a variety of different ways to go about finding a design solution In addition to suggesting fundamental ways to get the creative process moving and develop a design approach it also proposes various sources of inspiration for design ideas It focuses on the three elements of place form and function which can sometimes constitute immediate springboards for concrete designs These elements must eventually be incorporated as the design process Subjects Creativity in the design process Sources of inspiration and design approaches Working with place Working with form Working with function Spaces in Architecture Bert

Bielefeld, 2019-04-01 The design of a building is a complex process in which the architect develops spaces which are defined by a number of different parameters The most important of these are space requirements distances furniture and fittings and movement zones From the dimensions of the human body it is possible to derive guide values for these reference sizes that make spaces comfortable to be in and to use Spaces in Architecture is a useful reference work for students and designers for quickly looking up detailed information on space scenarios that occur in many different types of buildings For example the book lists all important dimensions for entrance areas doors staircases ramps and elevators On the basis of this fundamental information it is possible to design buildings in terms of function and type Experiments with Body Agent Architecture

Alessandro Ayuso, 2022-03-31 Experiments with Body Agent Architecture puts forward the notion of body agents non ideal animate and highly specific figures integrated with design to enact particular notions of embodied subjectivity in architecture Body agents present opportunities for architects to increase imaginative and empathic qualities in their designs particularly amidst a posthuman condition Beginning with narrative writing from the viewpoint of a body agent an estranged quattrocento spiritello who finds himself uncomfortably inhabiting a digital milieu or as the spiritello calls it Il Regno Digitale the book combines speculative historical fiction and original design experiments It focuses on the process of creating the multi media design experiments moving from the design of the body itself as an original prosthetic to architectural proposals emanating from the body A fragmented history of the figure in architecture is charted and woven into the designs with chapters examining Michelangelo's enigmatic figures in his drawings for the New Sacristy in the early sixteenth century Gian Lorenzo Bernini's physically ephemeral putti adorning chapels and churches in the seventeenth century and Austrian artist architect Walter Pichler's personal and prescient figures of the twentieth century
