Constructive Neural Networks Leonardo Franco, José M. Jerez, 2009-10-27 This book presents a collection of invited works that consider constructive methods for neural networks taken primarily from papers presented at a special session held during the 18 International Conference on Artificial Neural Networks ICANN 2008 in September 2008 in Prague Czech Republic The book is devoted to constructive neural networks and other incremental learning algorithms that constitute an alternative to the standard method of finding a correct neural architecture by trial and error These algorithms provide an incremental way of building neural networks with reduced topologies for classification problems Furthermore these techniques produce not only the multilayer topologies but the value of the connecting synaptic weights that are determined automatically by the constructing algorithm avoiding the risk of becoming trapped in local minima as might occur when using gradient descent algorithms such as the popular back propagation In most cases the convergence of the constructing algorithms is guaranteed by the method used Constructive methods for building neural networks can potentially create more compact and robust models which are easily implemented in hardware and used for embedded systems Thus a growing amount of current research in neural networks is oriented towards this important topic The purpose of this book is to gather together some of the leading investigators and research groups in this growing area and to provide an overview of the most recent advances in the techniques being developed for constructive neural networks and their applications

Development and Evolution of Brain Size Martine Hahn, 2012-12-02 Development and Evolution of Brain Size Behavioral Implications contains the proceedings of a symposium entitled Development and Evolution of Brain Size Behavioral Implications held at William Paterson College in Wayne New Jersey in April 1978 The papers explore the relationship between evolution and development and its implications for brain size and behavior This book is comprised of 18 chapters and begins with an overview of the brain behavior relationship with

emphasis on the importance of brain size for behavior the effects of genetic selection for brain size on brain substructures and behavior and whether genetic and environmental manipulations of brain size have similar consequences The next two chapters explain evolutionary theory and the evolution of the human brain as well as diversity in brain size A general model for brain evolution that offers some synthetic possibilities for approaching the questions of brain evolution size allometry and reorganization is then described The correlation between cerebral indices and behavioral differences is also discussed along with biochemical correlates of selective breeding for brain size The results of an experiment that assessed the effects of early undernutrition on brain and behavior of developing mice are presented This monograph should be of interest to students and practitioners in a wide range of disciplines including evolutionary biology and clinical psychology *Deep Learning* Dr. Om Prakash C, Dr. M. Applications of Mathematics in Models, Artificial Neural Networks and Arts Vittorio Capecchi,Massimo Buscema,Pierluigi Contucci,Bruno D'Amore,2010-08-03 The book shows a very original organization addressing in a non traditional way but with a systematic approach to who has an interest in using mathematics in the social sciences The book is divided in four parts a a historical part written by Vittorio Capecchi which helps us understand the changes in the relationship between mathematics and sociology by analyzing the mathematical models of Paul F Lazarsfeld the model of simulation and artificial societies models of artificial neural network and considering all the changes in scientific paradigms considered b a part coordinated by Pier Luigi Contucci on mathematical models that consider the relationship between the mathematical models that come from physics and linguistics to arrive at the study of society and those which are born within sociology and economics c a part coordinated by Massimo Buscema analyzing models of artificial neural networks d a part

coordinated by Bruno D Amore which considers the relationship between mathematics and art The title of the book Mathematics and Society was chosen because the mathematical applications exposed in the book allow you to address two major issues a the general theme of technological innovation and quality of life among the essays are on display mathematical applications to the problems of combating pollution and crime applications to mathematical problems of immigration mathematical applications to the problems of medical diagnosis etc b the general theme of technical innovation and creativity for example the art and mathematics section which connects to the theme of creative cities The book is very original because it is not addressed only to those who are passionate about mathematical applications in social science but also to those who in different societies are a involved in technological innovation to improve the quality of life b involved in the wider distribution of technological innovation in different areas of creativity as in the project Creative Cities Network of UNESCO

The Humachine Nada R. Sanders, John D. Wood, 2019-09-09 There is a lot of hype hand waving and ink being spilled about artificial intelligence AI in business The amount of coverage of this topic in the trade press and on shareholder calls is evidence of a large change currently underway It is awesome and terrifying You might think of AI as a major environmental factor that is creating an evolutionary pressure that will force enterprise to evolve or perish For those companies that do survive the silicon wave sweeping through the global economy the issue becomes how to keep their humanity amidst the tumult What started as an inquiry into how executives can adopt AI to harness the best of human and machine capabilities turned into a much more profound rumination on the future of humanity and enterprise This is a wake up call for business leaders across all sectors of the economy Not only should you implement AI regardless of your industry but once you do you should fight to stay true to your purpose your ethical convictions indeed your humanity even as our organizations continue to evolve While not holding any punches about the dangers posed by overpowered AI this book uniquely surveys where technology is limited and gives reason for cautious optimism about the true opportunities that lie amidst all the disruptive change currently underway As such it is distinctively more optimistic than many of the competing titles on Big Technology This compelling book weaves together business strategy and philosophy of mind behavioral psychology and the limits of technology leadership and law The authors set out to identify where humans and machines can best complement one another to create an enterprise greater than the sum total of

its parts the Humachine Combining the global business and forecasting acumen of Professor Nada R Sanders PhD with the legal and philosophical insight of John D Wood Esq the authors combine their strengths to bring us this profound yet accessible book This is a must read for anyone interested in AI and the future of human enterprise
