Talpo, Navjot Kaur, Gerardo Rosario Biella, 2023-06-08 Oxytocin is a pituitary hormone able to produce a multitude of heterogeneous central and peripheral responses Within the central nervous system oxytocin is synthesized by the hypothalamic parvocellular neurons and released in many different brain areas where it acts as a neuromodulator It exerts pro social and anxiolytic effects by promoting attachment trust maternal bonding social affiliation and eating and metabolic functions Imbalances in the oxytocinergic system are implicated in neuropsychiatric diseases associated with altered socio emotional competence such as autism spectrum disorder clinical depression and eating disorders Also oxytocin impairments could affect memory formation persistence and they have been found in some neurodegenerative diseases such as Alzheimer's disease and in several cancers Although substantial progress has been achieved in understanding single pieces of the complex neurobiology of the oxytocinergic system the puzzle is far from being complete It is still unclear how this single neuropeptide could exert such pleiotropic neuromodulatory effects Extending the comprehension of the mechanisms underlying the complex roles of the oxytocin will be of great interest as this molecule has the potentiality to be used as a drug treatment **Smellosophy** A. S. Barwich, 2020-07-14 For decades neuroscientists understood sensory perception as a matter of external stimuli sparking regions of the brain But this view has a key flaw odors don't line up consistently with the neural map A S Barwich explores the new science of smell and urges us to rethink theories of mind and brain inspired by the mapping model **The Routledge Handbook of the Senses in the Ancient Near East** Kiersten Neumann, Allison

Thomason, 2021-09-30 This Handbook is a state of the field volume containing diverse approaches to sensory experience bringing to life in an innovative remarkably vivid and visceral way the lives of past humans through contributions that cover the chronological and geographical expanse of the ancient Near East It comprises thirty two chapters written by leading international contributors that look at the ways in which humans through their senses experienced their lives and the world around them in the ancient Near East with coverage of Anatolia Egypt the Levant Mesopotamia Syria and Persia from the Neolithic through the Roman period It is organised into six parts related to sensory contexts Practice production and

taskscape Dress and the body Ritualised practice and ceremonial spaces Death and burial Science medicine and aesthetics and Languages and semantic fields In addition to exploring what makes each sensory context unique this organisation facilitates cross cultural and cross chronological as well as cross sensory and multisensory comparisons and discussions of sensory experiences in the ancient world In so doing the volume also enables considerations of senses beyond the five sense model of Western philosophy sight hearing touch taste and smell including proprioception and interoception and the phenomena of synaesthesia and kinaesthesia The Routledge Handbook of the Senses in the Ancient Near East provides scholars and students within the field of ancient Near Eastern studies new perspectives on and conceptions of familiar spaces places and practices as well as material culture and texts It also allows scholars and students from adjacent fields such as Classics and Biblical Studies to engage with this material and is a must read for any scholar or student interested in or already engaged with the field of sensory studies in any period

Genomics, Circuits, and Pathways in Clinical Neuropsychiatry Thomas Lehner, Bruce L. Miller, Matthew W. State, 2016-06-07 This foundational work comprehensively examines the current state of the genetics genomics and brain circuitry of psychiatric and neurological disorders It consolidates discoveries of specific genes and genomic regions associated with these conditions the genetic and anatomic architecture of these syndromes and addresses how recent advances in genomics are leading to a reappraisal of the biology underlying clinical neuroscience In doing so it critically examines the promise and limitations of these discoveries toward treatment and to the interdisciplinary nature of understanding brain and behavior Coverage includes new discoveries regarding autism epilepsy intellectual disability dementias movement disorders language impairment disorders of attention schizophrenia and bipolar disorder Genomics Circuits and Pathways in Clinical Neuropsychiatry focuses on key concepts challenges findings and methods in genetics genomics molecular pathways brain circuitry and related neurobiology of neurologic and psychiatric disorders Provides interdisciplinary appeal in psychiatry neurology neuroscience and genetics Identifies key concepts methods and findings Includes coverage of multiple disorders from autism to schizophrenia Reviews specific genes associated with disorders Discusses the genetic architecture of these syndromes Explains how recent findings are influencing the understanding of biology Clarifies the promise of these findings for future treatment

Flow at Work Clive Fullagar, Antonella Delle Fave, 2017-03-16 Flow can be defined as the experience of being fully engaged with the task at hand unburdened by outside concerns or worries Flow is an enjoyable state of effortless attention complete absorption and focussed energy The pivotal role of flow in fostering good performance and high productivity led psychologists to study the features and outcomes of this experience in the workplace in order to ascertain the impact of flow on individual and organizational well being and to identify strategies to increase the workers opportunities for flow in job tasks This ground breaking new collection is the first book to provide a comprehensive understanding of flow in the workplace that includes a contribution from the founding father of flow research Mihaly Csikszentmihalyi On a conceptual level this book clarifies the

features and structure of flow experience and provides research based evidence of how flow can be measured in the workplace on an empirical level as well as exploring how it impacts on motivation productivity and well being By virtue of its rigorous but also practical approach the book represents a useful tool for both scientists and practitioners The collection addresses a number of key issues including Core components of how the idea of flow differs from experience in the work context Organizational and task related conditions fostering flow at work How flow can be measured in the workplace The organizational and personal implications of flow The relationship between task features and flow opportunities at work Featuring contributions from some of the most active researchers in the field Flow at Work Measurement and Implications is an important book in an emerging field of study The concept of flow has enormous implications for organizations as well as the individual and this volume will be of interest to all students and researchers in organizational occupational psychology and positive psychology as well as practitioners and consultants with an interest in employee motivation and well being

Music, Brain, and Rehabilitation: Emerging Therapeutic Applications and Potential Neural Mechanisms Teppo Särkämö, Eckart Altenmüller, Antoni Rodríguez-Fornells, Isabelle Peretz, 2016-08-05 Music is an important source of enjoyment learning and well being in life as well as a rich powerful and versatile stimulus for the brain With the advance of modern neuroimaging techniques during the past decades we are now beginning to understand better what goes on in the healthy brain when we hear play think and feel music and how the structure and function of the brain can change as a result of musical training and expertise For more than a century music has also been studied in the field of neurology where the focus has mostly been on musical deficits and symptoms caused by neurological illness e g amusia musicogenic epilepsy or on occupational diseases of professional musicians e g focal dystonia hearing loss Recently however there has been increasing interest and progress also in adopting music as a therapeutic tool in neurological rehabilitation and many novel music based rehabilitation methods have been developed to facilitate motor cognitive emotional and social functioning of infants children and adults suffering from a debilitating neurological illness or disorder Traditionally the fields of music neuroscience and music therapy have progressed rather independently but they are now beginning to integrate and merge in clinical neurology providing novel and important information about how music is processed in the damaged or abnormal brain how structural and functional recovery of the brain can be enhanced by music based rehabilitation methods and what neural mechanisms underlie the therapeutic effects of music Ideally this information can be used to better understand how and why music works in rehabilitation and to develop more effective music based applications that can be targeted and tailored towards individual rehabilitation needs The aim of this Research Topic is to bring together research across multiple disciplines with a special focus on music brain and neurological rehabilitation We encourage researchers working in the field to submit a paper presenting either original empirical research novel theoretical or conceptual perspectives a review or methodological advances related to following two core topics 1 how are musical skills and attributes e g perceiving music

experiencing music emotionally playing or singing affected by a developmental or acquired neurological illness or disorder for example stroke aphasia brain injury Alzheimer s disease Parkinson s disease autism ADHD dyslexia focal dystonia or tinnitus and 2 what is the applicability effectiveness and mechanisms of music based rehabilitation methods for persons with a neurological illness or disorder Research methodology can include behavioural physiological and or neuroimaging techniques and studies can be either clinical group studies or case studies studies of healthy subjects are applicable only if their findings have clear clinical implications

Essential Pathways and Circuits of Autism Pathogenesis Gül Dölen, Mustafa Sahin, 2016-08-15 The Centers for Disease Control and Prevention estimate that 1 in 68 children in the United states is afflicted with autism spectrum disorders ASD yet at this time there is no cure for the disease Autism is characterized by delays in the development of many basic skills most notably the ability to socialize and adapt to novelty The condition is typically identified in children around 3 years of age however the high heritability of autism suggests that the disease process begins at conception The identification of over 500 ASD risk genes has enabled the molecular genetic dissection of the pathogenesis of the disease in model organisms such as mice Despite the genetic heterogeneity of ASD etiology converging evidence suggests that these disparate genetic lesions may result in the disruption of a limited number of key biochemical pathways or circuits Classification of patients into groups by pathogenic rather than etiological categories will likely aid future therapeutic development and clinical trials In this set of papers we explore the existing evidence supporting this view Specifically we focus on biochemical cascades such as mTOR and ERK signaling the mRNA network bound by FMRP and UBE3A dorsal and ventral striatal circuits cerebellar circuits hypothalamic projections as well as prefrontal and anterior cingulate cortical circuits Special attention will be given to studies that demonstrate the necessity and or sufficiency of genetic disruptions e g by molecular deletion and or replacement in these pathways and circuits for producing characteristic behavioral features of autism Necessarily these papers will be heavily weighted towards basic mechanisms elucidated in animal models but may also include investigations in patients

Rolls, 2014 What produces emotions Why do we have emotions How do we have emotions Why do emotional states feel like something What is the relation between emotion and reward value and subjective feelings of pleasure These are just some of the question considered in this book written by a leading neuroscientist in this field **Culture, Mind, and Brain** Laurence J. Kirmayer, Carol M. Worthman, Shinobu Kitayama, Robert Lemelson, Constance A. Cummings, 2020-09-24 Recent neuroscience research makes it clear that human biology is cultural biology we develop and live our lives in socially constructed worlds that vary widely in their structure values and institutions This integrative volume brings together interdisciplinary perspectives from the human social and biological sciences to explore culture mind and brain interactions and their impact on personal and societal issues Contributors provide a fresh look at emerging concepts models and applications of the co constitution of culture mind and brain Chapters survey the latest theoretical and methodological insights alongside the challenges in this area and describe how these new ideas are being applied in the sciences humanities arts mental health and everyday life Readers will gain new appreciation of the ways in which our unique biology and cultural diversity shape behavior and experience and our ongoing adaptation to a constantly changing world ***Behavioral Neuroscience of Motivation*** Eleanor H. Simpson, Peter D. Balsam, 2016-05-11 This volume covers the current status of research in the neurobiology of motivated behaviors in humans and other animals in healthy condition This includes consideration of the psychological processes that drive motivated behavior and the anatomical

electrophysiological and neurochemical mechanisms which drive these processes and regulate behavioural output The volume also includes chapters on pathological disturbances in motivation including apathy or motivational deficit as well as addictions the pathological misdirection of motivated behavior As with the chapters on healthy motivational processes the chapters on disease provide a comprehensive up to date review of the neurobiological abnormalities that underlie motivation as determined by studies of patient populations as well as animal models of disease The book closes with a section on recent developments in treatments for motivational disorders

Every Brain Needs Music Lawrence Sherman, Dennis Plies, 2023-05-16

Whenever a person engages with music when a piano student practices a scale a jazz saxophonist riffs on a melody a teenager sobs to a sad song or a wedding guest gets down on the dance floor countless neurons are firing Playing an instrument requires all of the resources of the nervous system including cognitive sensory and motor functions Composition and improvisation are remarkable demonstrations of the brain's capacity for creativity Something as seemingly simple as listening to a tune involves mental faculties most of us don't even realize we have Larry S Sherman a neuroscientist and lifelong musician and Dennis Plies a professional musician and teacher collaborate to show how our brains and music work in harmony They consider music in all the ways we encounter it teaching learning practicing listening composing improvising and performing in terms of neuroscience as well as music pedagogy showing how the brain functions and even changes in the process Every Brain Needs Music draws on leading behavioral cellular and molecular neuroscience research as well as surveys of more than a hundred musical people It provides new perspectives on learning to play teaching how to practice and perform the ways we react to music and why the brain benefits from musical experiences Written for both musical and nonmusical people including newcomers to brain science this book is a lively and easy to read exploration of the neuroscience of music and its significance in our lives
