Neuropeptides In Neuroprotection And Neuroregeneration:

Neuropeptides in Neuroprotection and Neuroregeneration Fred Nyberg,2012-06-19 Although the genomic era is no longer in its infancy the life sciences are still facing questions about the role of endogenous proteins and peptides in homeostasis and pathologies Delving into one of the most current fields of interest in biology and medicine Neuropeptides in Neuroprotection and Neuroregeneration describes the impact of neuropeptides on neuroprotection and neuroregeneration The book begins with chapters describing important features of the endogenous neuropeptide systems related to their formation receptor signaling and inactivation It includes chapters focused on the design and development of peptide like drugs peptidomimetics In addition the book covers General aspects regarding the biosynthesis structures and distribution of neuroactive peptides and their receptors Basic mechanisms for neuropeptide action metabolism as well as techniques for their detection and aspects essential for the cellular mechanisms underlying brain pathology Neuropeptides known for their impact in neurodegenerative and neuroprotective processes Fundamental aspects as well as recent progress in the development of peptidomimetics of neuroprotective and cognition enhancing peptides Neurodegeneration and

P. Riederer,D.B. Calne,R. Horowski,Y. Mizuno,W. Poewe,M.B.H. Youdim,2013-03-09 Volume 5 of the series Advances in Research on Neurodegeneration is concerned with themes which are currently the focus of intensive research and in which advances in our understanding of the pathological mechanisms underlying neurodegenerative diseases are expected in the

near future The first section contains five reviews devoted to the various neuroimaging technologies The discussion is concerned with the question of whether neuroimaging techniques make it possible to follow the process of degeneration as it occurs and which methods offer the required sensitivity and quantifiability for this purpose However the question needs to be examined of whether given the physical and chemical limitations of these techniques even under optimal conditions anatomical resolution can be improved to the extent that neurodegenerative diseases can be diagnosed earlier than currently possible and a confident diagnosis made The possibilities of using neuroimaging techniques to provide information regarding the effects of neuroprotective or neuroregenerative therapeutic strategies and for correlating the results of neuropsychological research with imaging data are also discussed The second section is concerned with the significance of endogenous or exogenous neurotoxins as triggers for neurodegenerative processes that may lead to Parkinsonism Vulnerability factors which include such factors as nerve ending sensitivity the synergistic effects of drugs and the various mechanisms underlying different toxins are discussed

Hormones in Neurodegeneration, Neuroprotection, and Neurogenesis Achille G. Gravanis, Synthia H. Mellon, 2011-06-24 As life expectancy increases and population ages the already enormous impact of neurodegeneration on society will become even larger without better prevention and treatment Developing strategies to prevent degeneration of neurons and to promote a healthy nervous system is thus critical The development of pharmacological agents that would increase production of new neurons was recently facilitated by the identification of the hormonal regulators of various steps of adult neurogenesis The proposed book is written by a group of top world experts involved in the study of the mechanisms of hormonal control of brain damage and repair The effects of thyroid and steroid hormones estrogens androgens progestins glucocorticoids various neurosteroids or polypeptide hormones CRF

urocortins somatostatin GH IGF leptin prolactin PACAP erythropoietin on neuronal survival and neurogenesis in various neurodegenerative conditions and in brain aging will be discussed in detail The proposed book is unique because it gives a comprehensive account of the neuroprotective and neurogenic effects of steroid and polypeptide hormones Furthermore new pharmacological approaches for treatment of neurodegenerative conditions are presented based on the neuroprotective and neurogenic properties of natural and synthetic hormones

Peptide Transport and Delivery into the Central Nervous System Laszlo Prokai, Katalin Prokai-Tatrai, 2012-12-06

Hypo or hypersecretion alteration in storage release catabolism and post translational processing of neuropeptides are associated with the etiology of many diseases affecting the central nervous system CNS Various peptides native to the brain and the spinal cord as well as various synthetic peptides peptide analogues and peptidomimetics developed as their agonists or antagonists could be useful in the treatment of these CNS maladies However peptides face a formidable obstacle in reaching the intended site of action due to the existence of the blood brain barrier BBB a vital element in the regulation of the internal environment of the brain and the spinal cord After reviews on the role and neuropharmaceutical potential of peptides properties of the BBB in the context of peptide transport in the CNS and potential transport mechanisms to cross the BBB this volume discusses the development present state of the art and future trends of various strategies to overcome this major obstacle to peptide pharmacotherapy involving the CNS Chapters are devoted to cover invasive approaches that circumvent the BBB by direct administration into the brain or the spinal cord and by transiently opening the tight junctions of or permeabilizing the endothelial cells separating the systemic circulation from the interstitial fluid of the CNS Subsequently physiologically based strategies that utilize biological carriers to gain access to the CNS are discussed in detail followed by methods encompassing prodrug and chemical delivery targeting strategies which aim at altering the properties of the peptide to enhance BBB transport and drug delivery strategies based on peptide vectors Finally a comparative evaluation on the present status and perspectives of the techniques is presented
