Handbook of Exact Solutions to Mathematical Equations Andrei D. Polyanin, 2024-08-26 This reference book describes the exact solutions of the following types of mathematical equations Algebraic and Transcendental Equations Ordinary Differential Equations Systems of Ordinary Differential Equations First Order Partial Differential Equations Linear Equations and Problems of Mathematical Physics Nonlinear Equations of Mathematical Physics Systems of Partial Differential Equations Integral Equations Difference and Functional Equations Ordinary Functional Differential Equations Partial Functional Differential Equations The book delves into equations that find practical applications in a wide array of natural and engineering sciences including the theory of heat and mass transfer wave theory hydrodynamics gas dynamics combustion theory elasticity theory general mechanics theoretical physics nonlinear optics biology chemical engineering sciences ecology and more Most of these equations are of a reasonably general form and dependent on free parameters or arbitrary functions The Handbook of Exact Solutions to Mathematical Equations generally has no analogs in world literature and contains a vast amount of new material The exact solutions given in the book being rigorous mathematical standards can be used as test problems to assess the accuracy and verify the adequacy of various numerical and approximate analytical methods for solving mathematical equations as well as to check and compare the effectiveness of exact analytical methods

The Sourcing of Application Software Services Jens Dibbern, 2012-12-06 The field of Information Systems IS outsourcing has drawn considerable attention among scientists and practitioners for the past fifteen years The present book analyses why organizations insource or outsource IS functions specifically the development and maintenance of software applications Concepts from transaction cost theory resource based theory incomplete contracts theory the theory of planned behaviour and cross cultural research are integrated into a coherent framework that recognizes the economic strategic and social dimension of the IS sourcing decision This framework is specified in a research model and empirically tested across countries Germany versus USA industries Machinery versus Finance and IS functions Application Software Development versus Maintenance using the partial least squares PLS approach of structural equation modelling The book thereby provides theoretically and empirically grounded insights into the reasons and implications of the IS sourcing decision *Cloud Services, Networking, and Management* Nelson L. Analytic Solutions for Flows Through Cascades

Peter Jonathan Baddoo, 2020-08-31 This thesis is concerned with flows through cascades i e periodic arrays of obstacles Such geometries are relevant to a range of physical scenarios chiefly the aerodynamics and aeroacoustics of turbomachinery flows Despite the fact that turbomachinery is of paramount importance to a number of industries many of the underlying mechanisms in cascade flows remain opaque In order to clarify the function of different physical parameters the author considers six separate problems For example he explores the significance of realistic blade geometries in predicting turbomachinery performance and the possibility that porous blades can achieve noise reductions In order to solve these challenging problems the author deploys and indeed develops techniques from across the spectrum of complex analysis the Wiener Hopf method Riemann Hilbert problems and the Schottky Klein prime function all feature prominently These sophisticated tools are then used to elucidate the underlying mathematical and physical structures present in cascade flows The ensuing solutions greatly extend previous works and offer new avenues for future research The results are not of simply academic value but are also useful for aircraft designers seeking to balance aeroacoustic and aerodynamic effects

Recent Advances in Radial Basis Function

Collocation Methods Wen Chen, Zhuo-Jia Fu, C.S. Chen, 2013-11-09 This book surveys the latest advances in radial basis function RBF meshless collocation methods which emphasize on recent novel kernel RBFs and new numerical schemes for solving partial differential equations The RBF collocation methods are inherently free of integration and mesh and avoid tedious mesh generation involved in standard finite element and boundary element methods This book focuses primarily on the numerical algorithms engineering applications and highlights a large class of novel boundary type RBF meshless collocation methods These methods have shown a clear edge over the traditional numerical techniques especially for problems involving infinite domain moving boundary thin walled structures and inverse problems Due to the rapid development in RBF meshless collocation methods there is a need to summarize all these new materials so that they are available to scientists engineers and graduate students who are interested to apply these newly developed methods for solving real world's problems This book is intended to meet this need Prof Wen Chen and Dr Zhuo Jia Fu work at Hohai University Prof C S Chen works at the University of Southern Mississippi [Book Catalog of the Library and Information Services Division: Subject index](#) Environmental Science Information Center.
