The New Encyclopaedia Britannica: Macropaedia : Knowledge in depth , 2003 *Uncommon Sense* Alan Cromer, 1995-08-24 Most people believe that science arose as a natural end product of our innate intelligence and curiosity as an inevitable stage in human intellectual development But physicist and educator Alan Cromer disputes this belief Cromer argues that science is not the natural unfolding of human potential but the invention of a particular culture Greece in a particular historical period Indeed far from being natural scientific thinking goes so far against the grain of conventional human thought that if it hadn't been discovered in Greece it might not have been discovered at all In *Uncommon Sense* Alan

Cromer develops the argument that science represents a radically new and different way of thinking Using Piaget s stages of intellectual development he shows that conventional thinking remains mired in subjective egocentric ways of looking at the world most people even today still believe in astrology ESP UFOs ghosts and other paranormal phenomena a mode of thought that science has outgrown He provides a fascinating explanation of why science began in Greece contrasting the Greek practice of debate to the Judaic reliance on prophets for acquiring knowledge Other factors such as a maritime economy and wandering scholars both of which prevented parochialism and an essentially literary religion not dominated by priests also promoted in Greece an objective analytical way of thinking not found elsewhere in the ancient world He examines India and China and explains why science could not develop in either country In China for instance astronomy served only the state and the private study of astronomy was forbidden Cromer also provides a perceptive account of science in Renaissance Europe and of figures such as Copernicus Galileo and Newton Along the way Cromer touches on many intriguing topics arguing for instance that much of science is essential complete there are no new elements yet to be discovered He debunks the vaunted SETI Search for Extraterrestrial Intelligence project which costs taxpayers millions each year showing that physical limits such as the melting point of metal put an absolute limit on the speed of space travel making trips to even the nearest star all but impossible Finally Cromer discusses the deplorable state of science education in America and suggests several provocative innovations to improve high school education including a radical proposal to give all students an intensive eighth and ninth year program eliminating the last two years of high school Uncommon Sense is an illuminating look at science filled with provocative observations Whether challenging Thomas Kuhn s theory of scientific revolutions or extolling the virtues of Euclid s Elements Alan Cromer is always insightful outspoken and refreshingly original
