Network Centric Operations Case Study Air To Air Combat With And Without Link:

Network-centric Operations Case Study Daniel Gonzales,2005 Link 16 enables network centric operations NCO in ways that voice only communications cannot How does this increase in effectiveness translate into success in battle More than 12 000 sorties were flown in the Joint Tactical Information Distribution System Operations Special Project where Link 16 and voice only communications were evaluated Using NCO metrics the authors gauged improvements provided by Link 16 The almost threefold increase in effectiveness shows the merits of the Link 16 and NCO concepts The authors conclude that further studies should examine more complex missions and increase understanding of NCO concepts **Network-Centric**

Operations Case Study: Air-to-Air Combat With and Without Link 16 ,2005 In the mid 1990s the U S Air Force at the request of Congress conducted the Joint Tactical Information Distribution System JTIDS Operational Special Project In this exercise the capabilities of F 15 air superiority aircraft equipped with voice only communications were compared with F 15s equipped with voice and JTIDS Link 16 data link communications in tactical air to air combat More than 12 000 sorties were flown in this special project Blue offensive counterair packages composed of these F 15s ranged in size from two to eight aircraft In all cases the packages were controlled and cued by Airborne Warning and Control System AWACS aircraft The size of the engagements ranged from two Blue fighters on two Red fighters to eight Blue fighters on 16 Red fighters Engagements occurred during daylight and night conditions The primary independent variable was whether the Blue F 15s were equipped with the Link 16 data link or with conventional voice communications only The capability of the Red aircraft remained consistent during the project On average Blue offensive counterair packages equipped with Link 16 achieved a two and a half times improvement in kill ratio Red aircraft to Blue aircraft destroyed both during the day and at night However it was unclear how and why this significant improvement in force effectiveness arose The aim of this study is to understand whether this increase in combat effectiveness stemmed from the network centric capabilities of F 15 aircraft equipped with Link 16 and fighter pilots able to effectively use data link communications **Unmanned Combat Air Systems in Future**

Warfare C. Wills,2016-04-29 Control of the air is the foundation for all conventional military operations against an adversary with an air defence capability In future warfare will it be possible for Unmanned Combat Air Systems to undertake the tasks and accept most of the risks that until now have been the lot of military aviators **Networked Forces in Stability**

Operations Daniel Gonzales,John Hollywood,Jerry M. Sollinger,James McFadden,John DeJarnette,2007-10-31 Compares three units that conducted stability operations in the same area in northern Iraq the 101st Airborne Division which had only limited digital communications the 3 2 Stryker brigade combat team SBCT and the 1 25 SBCT both equipped with digital networks and finds that leadership training and tactics and procedures are just as important as networking capabilities for improving mission effectiveness in stability operations **Cyberpower and National Security** Franklin D. Network Science National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2006-01-15 The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military's dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science

Review of ONR's Uninhabited Combat Air Vehicles Program National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Naval Studies Board, Committee for the Review of ONR's Uninhabited Combat Air Vehicles Program, 2000-08-24 Joint Vision 2010 addresses the need for achieving military dominance through the application of new operational concepts For the Department of the Navy future operational concepts will hinge on a continuance of forward yet unobtrusive presence and the capability to influence events ashore as required This capability will be enabled by the development and insertion into the forces of new technologies for providing command control and surveillance battlespace dominance power projection and force sustainment For example unmanned aerial vehicles UAVs

have recently proven to be valuable operational platforms for providing tactical intelligence by surveillance of the battlefield. To support naval force objectives the Office of Naval Research ONR has established a research program within the Strike Technology Division Code 351 of the Naval Expeditionary Warfare Science and Technology Department aimed at expanding the operational capabilities of UAVs to include not only surveillance and reconnaissance but strike and logistics missions as well. This new class of autonomous vehicles known as uninhabited combat air vehicles UCAVs is foreseen as being intelligent, recoverable and highly maneuverable in support of future naval operations.

Review of ONR's Uninhabited Combat Air Vehicles Program evaluates ONR's UCAV technology activities including its vision documents and its science and technology roadmap in areas of vehicle dynamics, communications, sensors and autonomous agents against criteria that would be selected by the committee such as the relevance for meeting future naval priorities, the cost and time scale for its utilization, duplication of effort and scientific and technical quality.
