

Networking in the Digital Age

The digital age has ushered in a transformative era of networking, reshaping the way we connect, communicate, and cultivate opportunities. In this era of constant connectivity, traditional boundaries have blurred, and the landscape of networking has expanded exponentially. The internet, coupled with an array of online platforms and tools, including the Digital Business Card, has revolutionized how individuals and professionals interact, collaborate, and forge relationships.

Networking, once confined to face-to-face meetings and physical events, has evolved into a dynamic digital realm where geography is no longer a barrier. Online networking platforms, such as social media, professional networking sites, and specialized forums, have become integral to our personal and professional lives.

Internet and Democracy in the Network Society Jan A.G.M. van Dijk, Kenneth L. Hacker, 2018-05-30

A seminal shift has taken place in the relationship between Internet usage and politics. At the turn of the century, it was presumed that digital communication would produce many positive political effects, like improvements to political information retrieval, support for public debate, and community formation, or even enhancements in citizen participation in political decision making. While there have been positive effects, negative effects have also occurred, including fake news and other political disinformation, social media appropriation by terrorists and extremists, echo chambers, and filter bubbles. Elections influenced by hostile hackers and campaign manipulation by micro-targeting marketing. It is time for critical re-evaluation. Designed to encourage critical thinking on the part of the student, internationally recognized experts Jan A.G.M. van Dijk and Kenneth Hacker chronicle the political significance of new communication technologies for the promotion of democracy over the last two decades. Drawing upon structuration theory and network theory and real-world case studies from across the globe, the book is logically structured around the following topics: Political Participation and Inclusion; Habermas and the Reconstruction of Public Space; Media and Democracy in Authoritarian States; Democracy and the Internet in China; E-government and democracy; Views of democracy and Internet use. Underpinned by up-to-date literature, this

important textbook is aimed at students and scholars of communication studies political science sociology political communication and international relations **Social Media and Networking: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2015-07-31 In the digital era users from around the world are constantly connected over a global network where they have the ability to connect share and collaborate like never before To make the most of this new environment researchers and software developers must understand users needs and expectations Social Media and Networking Concepts Methodologies Tools and Applications explores the burgeoning global community made possible by Web 2 0 technologies and a universal interconnected society With four volumes of chapters related to digital media online engagement and virtual environments this multi volume reference is an essential source for software developers web designers researchers students and IT specialists interested in the growing field of digital media and engagement This four volume reference includes various chapters covering topics related to Web 2 0 e governance social media activism internet privacy digital and virtual communities e business customer relationship management and more
