profound impact on many aspects of economic systems especially technological change and economic growth The analysis and modelling of this interrelationship is the central focus of this book While there exists a vast body of literature on economic growth the theories put forward so far have had limited success in explaining observed patterns of economic growth Growth cycles in particular continue to elude standard economic models though evolutionary economics has made some progress Seeking to fill the gap Torsten Heinrich s innovative approach uses microeconomics to explain heterogeneous sectoral dynamics on the meso level and then aggregating these to observed macroeconomic growth rates In this way it is shown that an evolutionary model of technological change with network effects can explain not only commonly observed asymmetric industry structures monopolies and oligopolies but also growth cycles The book includes a comprehensive account of the most influential economic growth theories a discussion of the research on network effects as well as an introduction to the methodology the model and a case study on the recent emergence of information and communication technology This important new volume will be relevant to all those interested in theoretical economics growth theory innovation economics agent based modelling and industry dynamics
