Neurobiological Foundations For Emdr Practice:

Neurobiological Foundations for EMDR Practice Uri Bergmann, 2012-05-21 This volume introduces the most current research about the neural underpinnings of consciousness and EMDR eye movement desensitization and reprocessing in regard to attachment traumatic stress and dissociation. It is the first book to comprehensively integrate new findings in information processing, consciousness, traumatic disorders of information processing, chronic trauma and autoimmune compromises, and the implications of these data on the Adaptive Information Processing (AIP) model and EMDR treatment. The text examines online wakeful information processing including sensation, perception, somatosensory integration, cognition, memory, language and motoricity, and off-line sleep information processing such as slow wave sleep and cognitive memorial processing as well as REM dream sleep and its function in emotional memory processing. The volume also addresses disorders of consciousness including coma, anesthesia and other neurological disorders, particularly disorders of Type 1 PTSD, complex PTSD, dissociative disorders and personality disorders. It delves into chronic trauma and autoimmune function, especially in regard to diseases of unknown origin and examines them from the perspective of autoimmune compromises resulting from the unusual neuroendocrine profile of PTSD sufferers. The final section integrates all material to illustrate the tenets of the AIP model and the implication of this material with respect to current EMDR treatment as well as techniques to render it more robust.

Key Features: Provides a neurobiological foundation that informs our understanding of human development, disorders of attachment and information processing. Examines biological underpinnings of EMDR and other psychotherapeutic modalities regarding successful treatment outcomes for attachment stress and dissociation. Offers the latest research in neurosciences relevant to attachment, traumatic stress and dissociation. Explicates disorders as outcomes of chronically dysregulated evolutionarily based biological action systems.
