Britain examines the changes in diet and health in Britain during the rapid social development of the late nineteenth and
early twentieth centuries It is particularly concerned with the ways in which the problems of urban life were ameliorated
How was infant and child mortality reduced How did family life go on in conditions where income was low and sometimes
intermittent where protected water supplies and proper sanitation were not available and where food preservation and food
technology were still limited How did the state devise diets for those in its care What were the choices available for
consumers The contributors to this book were historians and nutritionists and this gives a strong interdisciplinary flavour to
the volume Many of the problems encountered during British urban development were being experienced in the developing
world at the time The way in which Britain coped with the health hazards of late nineteenth century urban squalor had much
to tell those concerned with similar problems in contemporary cities in the developing world The book makes clear that life in
Britain in the late nineteenth and early twentieth centuries and life in the developing world at the time represented similar
stages of the process of demographic transition
