Air and Water Temperatures and Stream Flow Data from Convict Creek, Mono County, California, 1950 to 1962 Harry D. Kennedy, 1964 **An Introduction to UMTS Technology** Faris A. Muhammad, 2008 An Introduction to UMTS Specifications Testing and Standards Bodies is the most comprehensive text for practicing engineers and technicians about testing specification and standards bodies of cellular communications equipment It is aimed at those responsible for developing and maintaining both mobile and base station units Each chapter discusses in detail the necessary elements moving to the more advanced components In addition to testing specification and standards bodies readers will learn the development life cycle of UE and Node B building blocks what needs to be tested when and how testing should be performed as well as certification formalities including processes and procedures and testing tools and languages Buy or Review at Amazon com Paperback edition 89 95 *Ultrasonic Nano/Microfabrication, Handling, and Driving* Junhui Hu, 2024-02-14 Ultrasonic nano microfabrication handling and driving is an emerging actuation technology which utilizes ultrasonic vibration and the physical effects of ultrasonic vibration in fluids and solids to implement the fabrication handling and driving of nano micro scale objects This book provides readers with the fundamentals principles and characteristics of the ultrasonic devices for nano micro fabrication handling and driving and design methods of the devices Introduces fundamental concepts and offers examples of ultrasonic nano fabrication including ultrasonic nano rolling cutting and coating methods Features a wealth of examples to illustrate the ultrasonic concentration and ultrasonic tweezers Explains the principles of ultrasonic driving of gas molecules and demonstrates their applications in high performance gas sensor systems and metal air flow batteries Teaches the principles of ultrasonic driving of microfluids and their applications in metal air flow batteries and cooling of small solid heat sources Provides examples for the finite element method FEM modeling and computation of ultrasonic devices for nano micro fabrication handling and driving Summarizes the current and future trends in ultrasonic nano microfabrication handling and driving This book shares the advances methods and applications of ultrasonic micro nano fabrication techniques for entry level and advanced readers working on nano microfabrication gas sensing biological sensing metal air batteries electronic component cooling and other related areas **Analysis of Stream-temperature Variations in the Upper Delaware River Basin, New York** Owen O. Williams, 1971 **Using Additional Information in Streaming Algorithms** Raffael Buff, 2016-10-04 Streaming problems are algorithmic problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for these problems are forced to be space efficient as the input stream length generally exceeds the available storage In this thesis the two streaming problems most frequent item and number of distinct items are studied in detail relating to their algorithmic complexities and it is compared whether the verification of solution hypotheses has lower algorithmic complexity than computing a solution from the data stream For this analysis we introduce some concepts to prove space complexity lower bounds for an approximative setting

and for hypothesis verification For the most frequent item problem which consists in identifying the item which has the highest occurrence within the data stream we can prove a linear space complexity lower bound for the deterministic and probabilistic setting This implies that in practice this streaming problem cannot be solved in a satisfactory way since every algorithm has to exceed any reasonable storage limit For some settings the upper and lower bounds are almost tight which implies that we have designed an almost optimal algorithm Even for small approximation ratios we can prove a linear lower bound but not for larger ones Nevertheless we are not able to design an algorithm that solves the most frequent item problem space efficiently for large approximation ratios Furthermore if we want to verify whether a hypothesis of the highest frequency count is true or not we get exactly the same space complexity lower bounds which leads to the conclusion that we are likely not able to profit from a stated hypothesis The number of distinct items problem counts all different elements of the input stream If we want to solve this problem exactly in a deterministic or probabilistic setting or approximately with a deterministic algorithm we require once again linear storage size which is tight to the upper bound However for the approximative and probabilistic setting we can enhance an already known space efficient algorithm such that it is usable for arbitrarily small approximation ratios and arbitrarily good success probabilities The hypothesis verification leads once again to the same lower bounds However there are some streaming problems that are able to profit from additional information such as hypotheses as e g the median problem

Big Data Maribel Yasmina Santos, Carlos Costa, 2022-09-01 Big Data is a concept of major relevance in today's world sometimes highlighted as a key asset for productivity growth innovation and customer relationship whose popularity has increased considerably during the last years Areas like smart cities manufacturing retail finance software development environment digital media among others can benefit from the collection storage processing and analysis of Big Data leveraging unprecedented data driven workflows and considerably improved decision making processes The concept of a Big Data Warehouse BDW is emerging as either an augmentation or a replacement of the traditional Data Warehouse DW a concept that has a long history as one of the most valuable enterprise data assets Nevertheless research in Big Data Warehousing is still in its infancy lacking an integrated and validated approach for designing and implementing both the logical layer data models data flows and interoperability between components and the physical layer technological infrastructure of these complex systems This book addresses models and methods for designing and implementing Big Data Systems to support mixed and complex decision processes giving special attention to BDWs as a way of efficiently storing and processing batch or streaming data for structured or semi structured analytical problems
