Chemical products typically originate in resources that must be concentrated and purified chemically transformed and subjected to final purification Effluent streams from the processes must be treated to recycle reusable components and to remove environmentally harmful species Some industrial processes are devoted to environmental cleanup after pollution has occurred In addition many analytical methods require a separation for preconcentration or a separation may be an inherent part of the analysis itself Micro separations occurring at membranes or interfaces are also related phenomena employed for ion sensing Many species targeted for separation are naturally anionic Although the standard separations techniques of extraction ion exchange adsorption precipitation etc

Answer Set Programming Vladimir Lifschitz, 2019-08-29 Answer set programming ASP is a programming methodology oriented towards combinatorial search problems In such a problem the goal is to find a solution among a large but finite number of possibilities The idea of ASP came from research on artificial intelligence and computational logic ASP is a form of declarative programming an ASP program describes what is counted as a solution to the problem but does not specify an algorithm for solving it Search is performed by sophisticated software systems called answer set solvers Combinatorial search problems often arise in science and technology and ASP has found applications in diverse areas in historical linguistic in bioinformatics in robotics in space exploration in oil and gas industry and many others The importance of this programming method was recognized by the Association for the Advancement of Artificial Intelligence in 2016 when AI Magazine published a special issue on answer set programming The book introduces the reader to the theory and practice of ASP It describes the input language of the answer set solver CLINGO which was designed at the University of Potsdam in Germany and is used today by ASP programmers in many countries It includes numerous examples of ASP programs and presents the mathematical theory that ASP is based on There are many exercises with complete solutions

Market Response Models Dominique M. Hanssens, Leonard J. Parsons, Randall L. Schultz, 2005-12-19

From 1976 to the beginning of the millennium covering the quarter century life span of this book and its predecessor something remarkable has happened to market response research it has become practice Academics who teach in professional fields like we do dream of such things Imagine the satisfaction of knowing that your work has been incorporated into the decision making routine of brand managers that category management relies on techniques you developed that marketing management believes in something you struggled to establish in their minds It's not just us that we are talking about This pride must be shared by all of the researchers who pioneered the simple concept that the determinants of sales could be found if someone just looked for them Of course economists had always studied demand But the project of extending demand analysis would fall to marketing researchers now called marketing scientists for good reason who saw that in reality the marketing mix was more than price it was advertising sales force effort distribution promotion and every other decision variable that potentially affected sales The bibliography of this book supports the notion that the academic research in marketing led the way The journey was difficult sometimes halting but ultimately market response research advanced and then insinuated itself into the fabric of modern management
