Medical Imaging, 2007 **Forthcoming Books** Rose Arny, 2001 Kalman Filtering and Neural Networks Simon Haykin, 2001-10-08

State of the art coverage of Kalman filter methods for the design of neural networks. This self-contained book consists of seven chapters by expert contributors that discuss Kalman filtering as applied to the training and use of neural networks. Although the traditional approach to the subject is almost always linear, this book recognizes and deals with the fact that real problems are most often nonlinear. The first chapter offers an introductory treatment of Kalman filters with an emphasis on basic Kalman filter theory, Rauch-Tung-Striebel smoother, and the extended Kalman filter. Other chapters cover: An algorithm for the training of feedforward and recurrent multilayered perceptrons based on the decoupled extended Kalman filter (DEKF); Applications of the DEKF learning algorithm to the study of image sequences and the dynamic reconstruction of chaotic processes; The dual estimation problem; Stochastic nonlinear dynamics; The expectation maximization (EM) algorithm and the extended Kalman smoothing (EKS) algorithm; The unscented Kalman filter. Each chapter, with the exception of the introduction, includes illustrative applications of the learning algorithms described here, some of which involve the use of simulated and real life data. *Kalman Filtering and Neural Networks* serves as an expert resource for researchers in neural networks and nonlinear dynamical systems. An Instructor's Manual presenting detailed solutions to all the problems in the book is available upon request from the Wiley Marketing Department.

Adaptive Signal Processing Tulay Adali, Simon Haykin, 2010-06-25

Leading experts present the latest research results in adaptive signal processing. Recent developments in signal processing have made it clear that significant performance gains can be achieved beyond those achievable using standard adaptive filtering approaches. *Adaptive Signal Processing* presents the next generation of algorithms that will produce these desired results with an emphasis on important applications and theoretical advancements. This highly unique resource brings together leading authorities in the field writing on the key topics of significance, each at the cutting edge of its own area of specialty. It begins by addressing the problem of optimization in the complex domain, fully developing a framework that enables taking full advantage of the power of complex-valued processing. Then the challenges of multichannel processing of complex-valued signals are explored. This comprehensive volume goes on to cover Turbo processing, tracking in the subspace domain, nonlinear sequential state estimation, and speech
