## **Neural Networks For Identification Prediction And Control:**

Neural Networks for Identification, Prediction and Control Duc T. Pham,Xing Liu,2012-12-06 In recent years there has been a growing interest in applying neural networks to dynamic systems identification modelling prediction and control Neural networks are computing systems characterised by the ability to learn from examples rather than having to be programmed in a conventional sense Their use enables the behaviour of complex systems to be modelled and predicted and accurate control to be achieved through training without a priori information about the systems structures or parameters This book describes examples of applications of neural networks In modelling prediction and control The topics covered include identification of general linear and non linear processes forecasting of river levels stock market prices and currency exchange rates and control of a time delayed plant and a two joint robot These applications employ the major types of neural networks and learning algorithms The neural network types considered in detail are the multilayer perceptron MLP the Elman and Jordan networks and the Group Method of Data Handling GMDH network In addition cerebellar model articulation controller CMAC networks and neuromorphic fuzzy logic systems are also presented The main learning algorithm adopted in the applications is the standard backpropagation BP algorithm Widrow Hoff learning dynamic BP and evolutionary learning are also described *Neural Networks for Identification, Prediction and Control* Duc Pham,Xing Liu,2014-09-01
