The Mathematical Writings of Évariste Galois Évariste Galois, Peter M. Neumann, 2011 Before he died at the age of twenty shot in a mysterious early morning duel at the end of May 1832 Evariste Galois created mathematics that changed the direction of algebra This book contains English translations of almost all the Galois material The translations are presented alongside a new transcription of the original French and are enhanced by three levels of commentary An introduction explains the context of Galois work the various publications in which it appears and the vagaries of his manuscripts Then there is a chapter in which the five mathematical articles published in his lifetime are reprinted After that come the testamentary letter and the first memoir in which Galois expounded on the ideas that led to Galois Theory which are the most famous of the manuscripts These are followed by the second memoir and other lesser known manuscripts

This book makes available to a wide mathematical and historical readership some of the most exciting mathematics of the first half of the nineteenth century presented in its original form. The primary aim is to establish a text of what Galois wrote. The details of what he did, the proper evidence of his genius, deserve to be well understood and appreciated by mathematicians as well as historians of mathematics.

During these uncertain and turbulent times, intelligent technologies including artificial neural networks (ANN) and machine learning (ML) have played an incredible role in being able to predict, analyze, and navigate unprecedented circumstances across a number of industries ranging from healthcare to hospitality. Multi-factor prediction, in particular, has been especially helpful in dealing with the most current pressing issues such as COVID-19 prediction, pneumonia detection, cardiovascular diagnosis, and disease management, automobile accident prediction, and vacation rental listing analysis. To date, there has not been much research content readily available in these areas, especially content written extensively from a user perspective. *Biomedical and Business Applications Using Artificial Neural Networks and Machine Learning* is designed to cover a brief and focused range of essential topics in the field with perspectives, models, and first-hand experiences shared by prominent researchers discussing applications of artificial neural networks (ANN) and machine learning (ML) for biomedical and business applications, and a listing of current open-source software for neural networks, machine learning, and artificial intelligence. It also presents summaries of currently available open-source software that utilize neural networks and machine learning. The book is ideal for professionals, researchers, students, and practitioners who want to more fully understand, in a brief and concise format, the realm and technologies of artificial neural networks (ANN) and machine learning (ML) and how they have been used for prediction of multi-disciplinary research problems in a multitude of disciplines.
