Electromagnetic Code (NEC)-Basic Scattering Code. Part 2. Code Manual ,1979 The Numerical Electromagnetic Code Basic
Scattering Code is a user oriented computed code for the analysis of the far field patterns of antennas in the presence of
perfectly conducting metal structures at UHF and above The analysis is based on uniform asymptotic techniques formulated
in terms of the Geometrical Theory of Diffraction GTD Complicated structures can be simulated by arbitrarily oriented flat
plates an infinite ground plane and a finite elliptic cylinder A wide range of practical problems can be simulated using these
shapes For example flat plates can be used to model the superstructure of a ship the body of a truck or the wings and stores
of an aircraft The finite elliptic cylinder can be used to model a mast or smoke stack of a ship or the fuselage and engines of
an aircraft This document describes the FORTRAN coding in detail It gives background on practical aspects of the GTD and
contains an overview of the code organization This information will be of primary interest to someone attempting to modify
the code It will also be helpful when the code is being implemented on a computer system on which the coding may not be
