population who suffer from depression One treatment that should be especially suitable for the smartphone format is behavioral activation BA since it has strong empirical support as well as the benefits of being flexible and rather simple The overall aim of the thesis was to test and further develop a BA smartphone application as well as to build a method for how this smartphone application could be used in a comprehensive and effective way in depression treatment To fulfill this aim four studies were conducted The results showed that smartphones have the ability to be used in an effective way in the treatment of depression including as an add on to traditional face to face sessions The results also showed that the smartphone format was experienced as a portable and flexible way of accessing the treatment and thus could be more present in everyday life In conclusion there is reason to believe that smartphones will be integrated even further in society and therefore may serve an important role in future mental health care Since the first indications reveal that depression can be treated by means of a supported smartphone application it is highly possible that applications for other mental health problems will follow Furthermore in this thesis the same smartphone application has been tested in three different ways and there is potential to apply smartphones in a range of other formats such as in relapse prevention and as a way to intensify treatment during periods when needed From a psychiatric research point of view as my research group has been doing trials on guided internet treatment for more than 15 years it is now time to move to the next generation of information technology smartphones
