placing a high emotional and political value over the ownership of the water However Franklin Fisher and his coauthors demonstrate that when disputes in ownership are expressed as disputes about money values in most cases the benefits of ownership will be surprisingly small By assigning an economic value to water and treating water as a tradable resource parties see that the gains from cooperation exceed the costs resulting from the change in ownership A zero sum game becomes a win win situation To support this new approach Liquid Assets presents an innovative water allocation model that can be used to assist water management the cost benefit analysis of water infrastructure and the resolution of disputes The model takes system wide effects into account and is the first to overcome the failure of actual water markets to cope with the divergence between social and private benefits as implied by agricultural subsidies permitting the model user to impose his or her own values or policies Liquid Assets applies its methodology to Israel Jordan and Palestine a region where water is scarce and water conflicts are often thought to be explosive Indeed this book is the result of a joint effort of Israeli Jordanian Palestinian American and Dutch experts But the book s message and methods are not restricted to the Middle East They are applicable to water management and water disputes around the globe
