Science Education in Context Richard K. Coll,Neil Taylor,2019-02-18 This book presents an international perspective of the influence of educational context on science education The focus is on the interactions between curriculum development and

implementation particularly in non Western and non English speaking contexts i e outside the UK USA Australia NZ etc An important and distinguishing feature of the book is that it draws upon the experiences and research from local experts from an extremely diverse cohort across the world 26 countries in total The book addresses topics such as curriculum development research or evaluation of an implemented curriculum discussion of pressures driving curriculum reform or implementation of new curricula e g technology or environmental education the influence of political cultural societal or religious mores on education governmental or ministerial drives for curriculum reform economic or other pressures driving curriculum reform the influence of external assessment regimes on curriculum and so on *Curricular Program*

Implementation in the Context of Randomized Field Trials Gloria Isabel Miller, 2011 Abstract curricular program implementation in the context of randomized field trials Gloria Isabel Miller This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible proof of concept Further the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts The study sample consists of a total of 163 teachers in eight school districts across the United States In each case teachers were randomly assigned to using the curricular innovation or their currently used materials and processes The three cases HS Math NewScience and MathIntervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas math and science Each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students The cases represent differing student grade levels The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades However the cases are similar enough in research design instrumentation and data collection methods to make them comparable A key contribution of this investigation is the creation of a framework to measure the level of implementation the extent to which the teacher and students display the actions behaviors and interactions expected by using the innovation The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provide a way to view the rich complex interaction of implementation as a system with the larger system of the school organization Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers The paper concludes with implications for policy and future research **Science for All Children** National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, Center for Science, Mathematics, and Engineering Education, 1997-01-08 Remember the first time you planted a seed and watched it sprout Or explored how a

magnet attracted a nail If these questions bring back memories of joy and wonder then you understand the idea behind inquiry based science an approach to science education that challenges children to ask questions solve problems and develop scientific skills as well as gain knowledge Inquiry based science is based on research and experience both of which confirm that children learn science best when they engage in hands on science activities rather than read from a textbook The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten This easy to read and practical book shows how to bring about the changes recommended in the standards It provides guidelines for planning and implementing an inquiry based science program in any school district The book is divided into three parts Building a Foundation for Change presents a rationale for inquiry based science and describes how teaching through inquiry supports the way children naturally learn It concludes with basic guidelines for planning a program School administrators teachers and parents will be especially interested in the second part The Nuts and Bolts of Change This section describes the five building blocks of an elementary science program Community and administrative support A developmentally appropriate curriculum Opportunities for professional development Materials support Appropriate assessment tools Together these five elements provide a working model of how to implement hands on science The third part Inquiry Centered Science in Practice presents profiles of the successful inquiry based science programs in districts nationwide These profiles show how the principles of hands on science can be adapted to different school settings If you want to improve the way science is taught in the elementary schools in your community Science for All Children is an indispensable resource
