

to zoom in to get all the points in the trailing edge. The middle mouse button accepts your final selection

- Repeat the process for the points on the bottom of the curve. Name this PRESSURE.

- Then we want to create the surface on which we will calculate the fluid flow. To do this we will create a domain around 1 chord lengths above and below the aerofoil and 1.5 chord lengths before and after. This is slightly arbitrary and we may want to change this after we look at the results!
- Add points at (-1.5,1),(-1.5,-1),(2,1) and (2,-1) Click on the Create Point tool under the geometry tab and use the Explicit Locations tool to do this.

Join these points together with straight lines. Label the left hand one INLET, the right hand line EXIT and the upper and lower parts TOP and BOTTOM.

- We are going to construct an outer surface called FLUID which will then mesh later.
- Make a surface from the outer edges into surface (Geometry Tab → Create/Modify Surface → Simple Surface)
 - Click on the "Inherit Part" button so that it is no longer checked
 - Rename the Surface as FLUID
 - Select the four curves
 - Click on OK or Apply
 - This surface might not actually be visible. On the left hand side of the screen is tree menu that controls what is and is not visible. If you want to see the surface simply go through the menu and ensure that under "Geometry" the "Surfaces" node is ticked.

Setting up the Initial Blocking

To do this we need to apply what is known as a "blocking strategy". In *icemcfld* for structured meshes the geometry is joined to a series of blocks which are then filled with the cells that make up the actual volumes on which the calculation will take place on. The process of meshing is therefore somewhat different from the CAD programs you will have used up to now as you are not trying to draw the part but the surrounding area which the fluid surrounds.

- Go to the Blocking Tab
- Click on "Create Block" and ensure in the "Initialize Blocks" drop down the type is 2D Planar and the part selected is "FLUID". Click OK. A blue message saying "Initialize blocking done" should appear in the message window
- This creates a Block which we then need to associate to various edges
- In the Blocking Tab click on "Associate" (fifth tool from the left) then in the left hand menu that appears select "Associate Edge to Curve". This should look a bit like Figure 4 , note that in Figure 4 the points are not displayed.
- You now need to associate each side of the block one of the parts we made earlier. (INLET, OUTLET, TOP and BOTTOM). **This must be done separately for each part.** To do this: Click on the first edge (which is part of the blocking) and then the first curve (which is geometry). This is most easily done by left clicking and middle clicking - an on screen prompt guides as to which mouse button to press when.
