1.) Declan is buying a new pair of shoes with an original price of \$95.

Calculate the price of the shoes after 20% off.

$$95(0.20) = 19$$

$$95 - 19 = 76$$

Calculate the price of the shoes after \$20 off.

$$95 - 20 = 75$$

CIRCLE ONE: ☒ THE BETTER DEAL IS THE 20% OFF COUPON
☐ IF THE BETTER DEAL IS THE \$20 OFF COUPON.

2.) Marissa is buying a coffee that costs \$5.25.

Calculate the price of the coffee after 20% off.

$$5.25(0.20) = 1.05$$

$$5.25 - 1.05 = 4.20$$

Calculate the price of the coffee after \$1 off.

$$5.25 - 1 = 4.25$$

CIRCLE ONE: ☒ THE BETTER DEAL IS THE 20% OFF COUPON
☐ IF THE BETTER DEAL IS THE \$1 OFF COUPON.

3.) Aidan is buying a new backpack for school that originally costs \$40.

Calculate the price of the backpack after 20% off.

$$40(0.20) = 8$$

$$40 - 8 = 32$$

Calculate the price of the backpack after \$15 off.

$$40 - 15 = 25$$

CIRCLE ONE: ☐ THE BETTER DEAL IS THE 20% OFF COUPON
☒ IF THE BETTER DEAL IS THE \$15 OFF COUPON.

Mathematics Content for Elementary Teachers Douglas K. Brumbaugh, 2004-09-22 THE book for elementary education mathematics content courses Designed to help prospective teachers of elementary school mathematics learn content beyond the rote level this text stimulates readers to think beyond just getting the problem right and fosters their development into thoughtful reflective self motivated life long learners It stresses the what and why of elementary school mathematics content Hints are provided about how to teach the content but this is mostly left to courses and texts that are dedicated to that purpose The text is organized around the National Council for Teachers of Mathematics Principles and Standards for School Mathematics The Standards dictate the basic sections of the text Within each section appropriate specific topics are developed intertwined with technology problem solving assessment equity issues planning teaching skills use of manipulatives sequencing and much more In addition major focal points of the Standards are emphasized throughout effective teachers of mathematics should be able to motivate all students to learn should understand the developmental levels of how children learn should concentrate on what children need to become active participants in the learning environment and should be engaged in ongoing investigations of new mathematical concepts and teaching strategies Mathematics Content for Elementary Teachers is based on several fundamental premises The focus of mathematics education should be on the process not the answer Elementary teachers should know the mathematics content they are teaching know more than the content they are teaching and teach from the overflow of knowledge It is important for teachers to be flexible in allowing students to use different procedures teaching from the overflow of knowledge implies knowing how to do a given operation more than one way and being willing to examine many different ways Teachers need to learn to carefully cover the topics to be taught to reflect upon them and to be able to organize them To help prospective elementary teachers concentrate on the mathematics content they will be expected to teach and begin to build the foundation for the methods they will use this text includes only elementary mathematics content and does not address middle school concepts Pedagogical features The text is organized according to NCTM Standards An informal writing style speaks directly to readers and is geared to pre service teachers Focus is given to multiple methods of problem solving at four developmental levels Questions exercises and activities are interspersed throughout each section rather than gathered at the end of each chapter Complete solutions for exercises are provided

Mathematics and Politics Alan D. Taylor, Allison M. Pacelli, 2009-12-29 As a text for an undergraduate mathematics course for nonmajors Mathematics and Politics requires no prerequisites in either area while the underlying philosophy involves minimizing algebraic computations and focusing instead on some conceptual aspects of mathematics in the context of important real world questions in political science Five major topics are covered including a model of escalation game theoretic models of international conflict yes no voting systems political power and social choice Each topic is discussed in an introductory chapter and revisited in more depth in a later chapter This new

edition has added co author Allison Pacelli and two new chapters on Fairness and More Fairness The examples and the exercises have been updated and enhanced throughout Reviews from first edition This book is well written and has much math of interest While it is pitched at a non math audience there is material here that will be new and interesting to the readers Sigact News For mathematicians Taylor s book shows how the social sciences make use of mathematical thinking in the form of axiomatic systems and offers a chance to teach this kind of thinking to our students The College Mathematics Journal The writing is crisp and the sense of excitement about learning mathematics is seductive The political conflict examples are well thought out and clear Michael C Munger *Mathematical Concepts and Methods in Modern Biology* Raina Robeva, Terrell Hodge, 2013-02-26 Mathematical Concepts and Methods in Modern Biology offers a quantitative framework for analyzing predicting and modulating the behavior of complex biological systems The book presents important mathematical concepts methods and tools in the context of essential questions raised in modern biology Designed around the principles of project based learning and problem solving the book considers biological topics such as neuronal networks plant population growth metabolic pathways and phylogenetic tree reconstruction The mathematical modeling tools brought to bear on these topics include Boolean and ordinary differential equations projection matrices agent based modeling and several algebraic approaches Heavy computation in some of the examples is eased by the use of freely available open source software Features self contained chapters with real biological research examples using freely available computational tools Spans several mathematical techniques at basic to advanced levels Offers broad perspective on the uses of algebraic geometry polynomial algebra in molecular systems biology Practical Mathematical Cryptography Kristian Gjøsteen, 2022-08-17 Practical Mathematical Cryptography provides a clear and accessible introduction to practical mathematical cryptography Cryptography both as a science and as practice lies at the intersection of mathematics and the science of computation and the presentation emphasises the essential mathematical nature of the computations and arguments involved in cryptography Cryptography is also a practical science and the book shows how modern cryptography solves important practical problems in the real world developing the theory and practice of cryptography from the basics to secure messaging and voting The presentation provides a unified and consistent treatment of the most important cryptographic topics from the initial design and analysis of basic cryptographic schemes towards applications Features Builds from theory toward practical applications Suitable as the main text for a mathematical cryptography course Focus on secure messaging and voting systems Elements of Numerical Mathematical Economics with Excel Giovanni Romeo, 2019-11-28 Elements of Numerical Mathematical Economics with Excel Static and Dynamic Optimization shows readers how to apply static and dynamic optimization theory in an easy and practical manner without requiring the mastery of specific programming languages that are often difficult and expensive to learn Featuring user friendly numerical discrete calculations developed within the Excel worksheets the book includes key examples and economic applications solved step by

step and then replicated in Excel After introducing the fundamental tools of mathematical economics the book explores the classical static optimization theory of linear and nonlinear programming applying the core concepts of microeconomics and some portfolio theory This provides a background for the more challenging worksheet applications of the dynamic optimization theory The book also covers special complementary topics such as inventory modelling data analysis for business and economics and the essential elements of Monte Carlo analysis Practical and accessible Elements of Numerical Mathematical Economics with Excel Static and Dynamic Optimization increases the computing power of economists worldwide This book is accompanied by a companion website that includes Excel examples presented in the book exercises and other supplementary materials that will further assist in understanding this useful framework Explains how Excel provides a practical numerical approach to optimization theory and analytics Increases access to the economic applications of this universally available relatively simple software program Encourages readers to go to the core of theoretical continuous calculations and learn more about optimization processes

Calvert, William L. Voxman, 1994 A succinct introduction to topics in finite mathematics The text includes examples and problems The author takes a computer assisted approach to problem solving which allows the student to focus on underlying techniques The software package CALIPSO is bound in the back of the text Using CALIPSO the student can perform a variety of complex operations with a minimum of effort These operations include the Gauss Jordan elimination methods the geometric and simplex methods for solving linear

programming problems matrix operations and a variety of statistical and logical procedures CALIPSO makes it possible to include more realistic applied problems since students do not have to solve entire problems by hand For example CALIPSO performs the calculations necessary to solve complex problems involving interest rates annuities and amortization Instructions for using the package are integrated throughout the text
