 2. **Identify the main purpose of the passage.**

- The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.
- | Variable | Coefficient | Standard Error | t-statistic | p-value |
|--|-------------|----------------|-------------|---------|
| Age of the head of household | 0.001 | 0.001 | 1.2 | 0.23 |
| Gender of the head of household (Male = 1, Female = 0) | -0.05 | 0.02 | -2.5 | 0.01 |
| Constant | 1.5 | 0.1 | 15.0 | <0.001 |
- The regression results indicate that the age of the head of household has a very small, positive effect on the number of children in the household, which is not statistically significant. However, the gender of the head of household has a significant negative effect, suggesting that households headed by females tend to have fewer children than those headed by males.
